Who we are

Rothesay is the UK's largest specialist pensions insurer, purpose-built to protect pension schemes and their members' pensions. Our singular focus is to secure pension annuities for the future, providing certainty for our policyholders.

We manage over

£73bn
in assets

Secure the pensions of nearly

1 million
people

Pay-out, on average, over

£360m
in pension payments
each month

Our differentiators

Discipline

Rothesay maintains a disciplined approach in a competitive environment

Investment

Our in-house investment team continues to invest in high-quality assets in line with our long-term investment strategy

Innovation

Rothesay continually seeks new and innovative ways to support our clients and partners

We are safeguarding the future for every one of our policyholders, and providing long-term value to our shareholders.

Introduction

1. Background and basis of preparation

The Solvency II regime is based around a three pillar model:

- Pillar 1 – the qualitative and quantitative requirements for the calculation of solvency.
- Pillar 2 – governance requirements and own risk assessment.
- Pillar 3 – reporting requirements.

The annual Solvency and Financial Condition Report (SFCR) is a key component of Pillar 3. The structure and contents of the SFCR are prescribed under Solvency II regulations. The disclosures in the Group SFCR and quantitative reporting templates (QRTs) have been prepared in accordance with applicable PRA Rules and Solvency II regulations.

Sections A and D include information based on the recognition and measurement principles applicable under the relevant Generally Accepted Accounting Principles (GAAP) as presented in the financial statements. The Rothesay Limited Group consolidated financial statements are prepared in accordance with UK-adopted International Financial Reporting Standards (IFRS) and in conformity with the requirements of the Companies Act 2006.

The SFCR is structured as follows:

- Section A provides a description of Rothesay and its performance for the year ended 31 December 2025;
- Section B describes the system of governance for Rothesay;
- Section C describes the risks faced by the business and the mitigation techniques used;
- Section D provides details of the way in which assets and liabilities have been valued for solvency purposes; and
- Section E provides information on Rothesay's solvency position.

The required QRTs have been provided as an appendix to this report.

Further information on the performance of Rothesay Limited (RL) and Rothesay Life Plc (RLP) can be found in the 2025 Report and Accounts. These can be found at www.rothesay.com/about-us/financials.

2. Scope

The SFCR covers both:

- Rothesay Limited (RL), and its subsidiaries (the Group or Rothesay); and
- Rothesay Life Plc (RLP), the regulated insurance subsidiary.

Rothesay has a waiver to produce a single SFCR for the Group.

As a relatively simple group, Rothesay applies all of our risk management, internal control systems and reporting procedures at a Group level and they are therefore applied consistently across all entities in the Group, including RLP.

Group controls and procedures are supplemented as required by specific requirements for Riverton Home Finance Limited ('Riverton') and the non-UK entities.

Executive Summary

A. Business and performance

Rothesay is the UK's largest specialist pensions insurer, purpose-built to protect pension schemes and their members' pensions. Our singular focus is to secure pension annuities for the future, providing certainty as well as service excellence for our policyholders.

Our careful approach to investment, prudent underwriting and service excellence means we are trusted to provide pension solutions by the pension schemes of some of the UK's best known companies including British Airways, Cadbury, the Civil Aviation Authority, The Co-operative, Smiths Industries and Telent.

Using sophisticated risk management, our expert in-house investment team is continually developing new ways to drive predictable, dependable returns that reduce risk and create real security.

Today, we manage over £73bn in assets, secure the pensions of nearly one million people, and pay out, on average, over £360m in pension payments each month. We are safeguarding the future for every one of our policyholders, and providing long-term value to our shareholders.

Rothesay's core market is the UK pension scheme Bulk Purchase Annuity (BPA) market. Trustees of pension schemes purchase BPA policies with insurers such as Rothesay to help them de-risk their scheme's uncertain asset and liability cash flows.

These Bulk Purchase Annuities may take the form of a "buy-in", where Rothesay makes annuity payments in bulk to the ceding pension scheme which then makes onward payment to its members, or a "buy-out" where the pension scheme members become direct policyholders of Rothesay.

Significant recent improvements in pension scheme solvency have meant that BPA policies have become increasingly affordable for pension schemes, and commentators forecast that this demand will not slow down in the foreseeable future. It is clear that buy-ins and buy-outs will continue to be an essential de-risking tool for trustees and sponsors of UK defined benefit pension schemes.

Rothesay's business model is focused around these key areas:

- Creating innovative and bespoke solutions;
- Underwriting and execution;
- Delivering pension benefits and excellent client service;
- Transition to an efficient, responsive platform;
- Investing and managing the assets; and
- Long-term risk management.

Executive Summary **continued**

Throughout 2025, we maintained our disciplined approach to new business, remaining patient in the competitive market environment to ensure that returns are attractive.

- **New business:** During the year, Rothesay wrote new business of £5.2bn (2024: £15.7bn).
- **IFRS profits:** Adjusted operating profit of £1,039m (2024: £1,779m). IFRS profit before tax of £1,205m (2024: £113m).
- **Solvency position:** Regular stress testing and live monitoring of the financial and solvency position of Rothesay has allowed us to respond dynamically as the market evolved. We ended the year with Group Solvency Capital Requirement (SCR) coverage of 246% (2024: 261%) and RLP SCR coverage of 249% (2024: 264%).
- **Dividend:** During the year Rothesay Limited paid an interim dividend of 31p per share, or £488m.

B. System of governance

The Boards of Rothesay, together with management, are responsible for ensuring the security of our obligations to our policyholders and generating and delivering sustainable shareholder value through the management of Rothesay's business.

Rothesay has a risk management framework (RMF) which is aligned to the 'three lines of defence model'. Fundamental to this is that every employee knows how they contribute to the effective identification, management, mitigation and monitoring of all types of risks.

The RMF ensures that accountabilities and responsibilities are clearly agreed and documented, and that there are appropriate checks and balances, including segregation of responsibilities.

The 'three lines of defence' model is widely used in financial services, and sets the boundaries between the different areas, making sure that there are no gaps in risk management or unexpected overlaps in accountability.

Executive Summary continued

Our risk management governance structure

Rothesay Limited

Board Risk Committee	Customer Conduct Committee
Assists the Board in providing leadership, direction and oversight of the Group's risk appetite, tolerance, risk strategy, risk governance and risk management framework and of the risk aspects of major investments and corporate transactions. Its primary function is the ongoing monitoring and control of all financial, operational, insurance and other enterprise-wide risks associated with the activities of Rothesay.	Assists the Board in ensuring that conduct towards customers meets Rothesay's strategic objectives, operates within risk appetite and maintains compliance with applicable laws and regulatory requirements and expectations.
Executive Risk Committee **	Executive Customer Committee *
Responsible for the overall operation of the Risk Management Framework (RMF), ongoing monitoring and control of enterprise-wide risk, including review and approval of all material new investment, hedging or liability transactions.	Responsible for ensuring business culture, strategy and operational processes are effectively controlled and deliver appropriate customer outcomes.

Risk Management Committees

Customer Working Group *	Credit Rating Committee **	Liquidity Working Group *
Responsible for the review of policyholder and customer activities, ensuring that fair outcomes are being delivered.	Responsible for assigning, monitoring and validating internal credit ratings and approving rating methodologies.	Responsible for the ongoing management of liquidity, including the continual monitoring of the appropriateness of the liquidity risk management framework.
Technology Risk Committee **	Sustainability Committee **	ALM Committee *
Responsible for the ongoing management of technology risks across Rothesay, encompassing technology operations risk, data integrity and protection risk, and cyber security risk.	Responsible for the development and implementation of the climate change and sustainability strategy and risk management framework.	Responsible for review and approval of significant asset, liability and hedging activities.
Underwriting and Liabilities Committee *	Business Controls Committee *	Investment Risk Committee **
Responsible for considering all new insurance and reinsurance transactions which Rothesay is considering and for providing oversight and review of all existing member data, experience and bookings of all such transactions which Rothesay subsequently enters into.	Responsible for ensuring that business processes are effectively controlled and operational risks are appropriately managed.	Responsible for approving new asset transactions and monitoring credit and counterparty risk associated with the activities of Rothesay.

* Denotes 1st Line Committee.

** Denotes 2nd Line Committee.

The Board is responsible for overseeing the management of exposure to risks. It is supported by the Board Risk Committee whose membership consists entirely of Non-Executive Directors and looks to ensure that the management of the business is conducted within the delegated risk framework from the main Board.

This model of separation of responsibilities is also aligned to the Senior Managers & Certification Regime (SMCR), which ensures that individuals have very clear allocation of responsibilities.

Executive Summary continued

Building on this model, the RMF then adds the detail such that risk management ownership, responsibilities and processes are clear. This both informs and is directed by Rothesay's business strategy. The foundation of the RMF is the clear identification of the risks that Rothesay faces. From this, the RMF can then go on to define detailed aspects including:

- Risk appetites and risk limits;
- How risks should be measured and reported on;
- Processes for controlling or managing risks; and
- Individual accountability for risk topics.

In order to clearly identify risk, Rothesay has defined a Risk Taxonomy, which is a consistent way of describing and sub-dividing risks consistently across Rothesay and between time periods. This is regularly reviewed to ensure that it is complete.

C. Risk profile

Rothesay is a purpose-built annuity provider whose operations are materially within the United Kingdom. Our strategic approach is to de-risk our business in order to achieve attractive risk-adjusted returns. We aim to protect regulatory surplus, manage liquidity and minimise balance sheet volatility.

Changes in Rothesay's risk profile

Rothesay's risk profile has evolved due to a range of internal and external factors, but remains materially the same as in previous years.

The geopolitical environment continues to show heightened uncertainty and volatility. In the UK, Labour came to power in 2024 and have been dealing with a set of material domestic and global challenges alongside limited financial flexibility. In the US, the Trump Administration's trade policy and use of tariffs has impacted global trade dynamics with increased costs and uncertainty for trading partners, consumers and companies. Globally, the geopolitical situation remains volatile with a number of conflicts continuing and new conflicts emerging. Inflationary pressures remain high, and global interest rates are elevated and remain subject to international developments and geopolitical impacts on government debt levels and inflation, respectively.

Operational risks are evolving, for example as we move our IT systems onto a fully in-house platform, and launch our new administration proposition RothesayOne. As our capabilities continue to develop, our operational risks evolve accordingly and we remain committed to advancing and maturing our risk management framework in alignment with these changes.

The table below provides a breakdown of Rothesay's solvency capital requirement (SCR) pre-diversification benefit, split between modules as at 31 December 2025 and 31 December 2024. Insurance risk is mostly longevity risk, which reduced over 2025 mainly due to reinsurance transacted. Market risk is dominated by spread risk, i.e. the risk that credit spreads widen.

Composition of SCR (%)	2025	2024
Market risk	57	52
Insurance risk	24	28
Operational risk	12	12
Counterparty risk	7	8

Risk management is at the heart of Rothesay's culture, systems and processes. We have a well-established process of identifying, managing and monitoring risks, on a continuous basis. This allows Rothesay to make rapid, informed decisions to manage through adverse conditions, as well as ensuring that we are able to invest appropriately where the risk/reward metrics are favourable.

Executive Summary continued

D. Valuation for solvency purposes

The table below summarises the Group and RLP's assets and liabilities valued in accordance with Solvency II regulatory basis as at 31 December.

	RL		RLP	
	2025 £m	2024 £m	2025 £m	2024 £m
Total assets	124,207	120,660	124,217	120,111
Total liabilities	(118,302)	(114,672)	(118,293)	(114,089)
Excess of assets over liabilities	5,905	5,988	5,924	6,022

E. Capital management

Rothesay's capital resources are of critical importance. Rothesay's capital management framework is designed to meet the following objectives:

- To ensure that our liabilities to policyholders can be met in a full and timely manner;
- To provide long-term confidence in Rothesay;
- To satisfy our regulatory obligations;
- To match the profile of our assets and liabilities, taking account of the risk inherent in the business;
- To allocate capital efficiently to support new business growth;
- To retain financial flexibility by maintaining strong liquidity; and
- To provide an appropriate return to shareholders.

Rothesay aims to maintain solvency coverage in the range of 140% to 160% of the regulatory solvency capital requirement (SCR). We started 2025 with capital surplus well above our target operating range, but as we write new business the solvency coverage is expected to move closer to our target operating range.

We operate a dynamic capital management framework which reflects the sensitivity of different performance measures. Our access to real-time solvency information and balance sheet sensitivities allows us to tailor our hedging strategy to manage the trade-offs between the solvency capital position and the economic value of the business in such a way as to protect the long-term value of the business.

During October 2025, RLP repaid £250m of Tier 2 borrowings. During December 2025, RLP issued \$500m Restricted Tier 1 (RT1) debt in the US dollar market. The notes are perpetual with the first call date being 3 June 2035. A fixed coupon of 7% is payable annually in arrears.

Some of the new business recently written remains outside Rothesay's Matching Adjustment Portfolio in order to provide flexibility in transitioning assets to our long-term investment strategy. The business is eligible for inclusion in the Matching Adjustment Portfolio and moving the business would improve Rothesay's solvency position because the Matching Adjustment could then be used in calculating the Technical Provisions.

As at 31 December 2025, RLP had available Own Funds of £9,272m (2024: £9,201m) and Rothesay Limited had available Own Funds of £9,176m (2024: £9,098m).

Executive Summary continued

Group SCR coverage decreased from 261% at 31 December 2024 to 246% at 31 December 2025 and SCR coverage at RLP decreased from 264% at 31 December 2024 to 249% at 31 December 2025 predominately driven by the execution of new business and interest rate moves. SCR coverage differs between the Group and RLP because of Group adjustments. This can be seen in QRT IR.23.01 Own Funds. SCR and Minimum Capital Requirement (MCR) coverage is summarised in the table below:

	RL		RLP	
	2025	2024	2025	2024
Tier 1 capital unrestricted (£m)	5,819	5,910	5,915	6,013
Tier 1 capital restricted (£m)	1,367	984	1,367	984
Tier 2 capital (£m)	1,499	1,733	1,499	1,733
Tier 3 capital (£m)	491	471	491	471
Own Funds available to meet the SCR (£m)	9,176	9,098	9,272	9,201
Ineligible capital	(156)	(573)	(156)	(573)
Own Funds eligible to meet SCR (£m)	9,020	8,525	9,116	8,628
SCR (£m)	3,668	3,262	3,668	3,262
Surplus above SCR (£m)	5,352	5,263	5,448	5,366
SCR coverage (%)	246%	261%	249%	264%
SCR coverage without transitional solvency relief (%)	241%	255%	244%	258%
MCR (£m)	1,333	1,277	1,333	1,277
Total eligible Own Funds to meet the MCR (£m)	7,452	7,149	7,549	7,252
MCR coverage (%)	559%	560%	566%	568%

RL and RLP have continued to meet both the MCR and SCR during 2025. Eligible Own Funds to meet MCR excludes all Tier 3 capital, and Tier 2 capital is restricted to 20% of MCR.

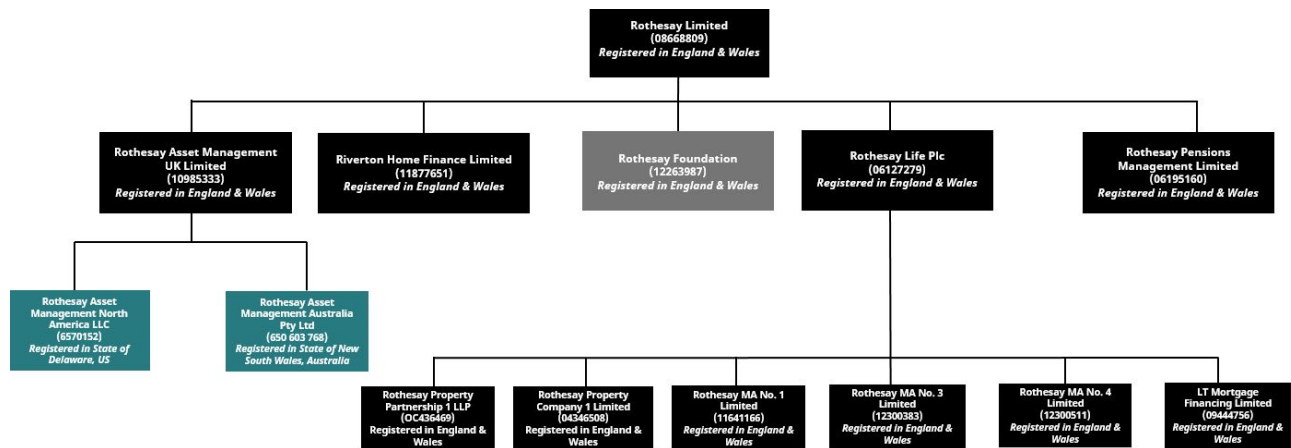

A. Business and performance

A.1 Business

A.1.1 Rothesay background and structure

Rothesay Limited is the ultimate holding company of the Rothesay Group, and is a UK limited company with thirteen wholly owned subsidiaries (the Group).

The structure of the Rothesay Group is shown in the diagram below:

The Rothesay Group also consolidated a further three special purpose entities over which Rothesay Group has control in accordance with the requirements of IFRS 10. These are FCT Morisot incorporated in August 2024 in France, FCT Chagall incorporated on 3 September 2025 in France and Lambay Capital DAC incorporated in November 2024 in Republic of Ireland. All entities were incorporated in relation to our investment in French home loans. Although the FCTs are consolidated under IFRS, they are not consolidated under Solvency II (refer to D.1 for consolidation approach).

Rothesay Foundation, a charitable foundation, is not incorporated into the consolidated financial statements as the charity is controlled by its trustees rather than Rothesay Limited or the Group.

The particulars of the Group's subsidiaries as at 31 December 2025 are listed in the Quantitative Reporting Template (QRT) IR.32 in the Appendix of this document and note H.2 of the Group's Annual report and accounts. The material insurance undertaking of the Group is Rothesay Life Plc.

A. Business and performance **continued**

A.1.2 Material lines of business and geographical areas

Rothesay is a purpose-built annuity provider, sourcing business through three different channels:

- Pension risk transfers (both buy-in and buy-outs) from pension schemes;
- Reinsurance of annuity portfolios followed by Part VII transfer; and
- Acquisition of other annuity providers.

Rothesay only writes insurance business in the United Kingdom. Rothesay Asset Management North America LLC assists Rothesay in sourcing US assets and Rothesay Asset Management Australia Pty Ltd assists Rothesay in sourcing Australian assets. FCT Morisot, FCT Chagall and Lambay Capital Designated Activity Company facilitate our investment in French home loans.

Rothesay manages the risks associated with our in-force portfolio of annuities in order to protect policyholder security and provide shareholders with a stable return. We look to use surplus capital to fund growth opportunities which we assess with a disciplined approach to risk and return.

A.1.3 Significant business events during 2025

Other business events

Significant recent improvements in pension scheme funding levels have meant that BPA policies have become increasingly affordable for pension schemes, and commentators forecast that this demand is expected to remain for the foreseeable future.

We executed 17 transactions in 2025 (2024: 7), generating £5.2bn of new business premiums (2024: £15.7bn), and £1,205m of IFRS pre-tax profits (2024: £113m) for the Rothesay Limited Group and IFRS pre-tax profit of £1,207m (2024: £121m) for Rothesay Life Plc.

Shareholders

The shareholdings of each ultimate shareholder in Rothesay Limited as at 31 December 2025 based on the percentage nominal share capital owned are as follows:

- GIC Private Limited: 50.2%
- MassMutual Financial Group: 47.6%

Both shareholders retain equal governance rights, including an equal number of Board Director positions and both remain committed to providing primary capital should the Company require it for significant growth opportunities. The remaining percentage is owned by the Directors, management, employees and the trustees of The Rothesay Employee Share Trust and The Rothesay Life UK Employee Share Incentive Plan.

Rothesay Limited holds 100% of the shares in RLP.

A. Business and performance **continued**

A.2 Underwriting performance

Since we prepare our financial statements in accordance with International Financial Reporting Standards (IFRS), the underwriting performance information given in this section is on an IFRS basis.

The financial performance analysis shown in the table below shows how profits and losses have been generated.

Financial performance (Alternative analysis of profit/(loss) generation)	2025 £m	2024 £m
New business profit	197	886
Acquisition expenses	(95)	(196)
Performance of the in-force book	975	1,102
Non-economic assumption changes and model refinement	(38)	(13)
Adjusted operating profit before tax	1,039	1,779
Economic gains/(losses)	397	(765)
Borrowing costs	(170)	(166)
Increase in CSM	(61)	(735)
IFRS profit before tax	1,205	113

Operating profits for 2025 were £1,039m (2024: £1,779m). Adjusted operating profits were increased by economic gains and reduced by borrowing costs and the net increase in the CSM, leading to IFRS pre-tax profits of £1,205m (2024: £113m).

Profits generated on the in-force book were £975m (2024: £1,102m). These profits mainly arose from outperformance in relation to new investments made during the period relative to those assumed in new business underwriting. Profits generated on the in-force book also includes investment returns on surplus assets and the release of the risk adjustment as in-force business runs off.

Economic gains during 2025 were primarily driven by the performance of government bonds received as part of premiums paid to Rothesay for liabilities taken on in 2024 and 2025.

The Annual Report and Accounts for Rothesay and RLP can be obtained from Companies House or via our website at www.rothesay.com.

A. Business and performance continued

A.3 Investment performance

The table below provides an analysis of the Rothesay Limited Group's financial investments and liabilities at fair value.

	2025 £m	2024 £m
Collective investment schemes	4,601	6,092
Government sub-sovereign and agency obligations	26,543	24,022
Corporate bonds and other corporate debt	36,631	34,407
Collateralised agreements and financing	172	61
Loans secured on property	10,180	6,365
Certificates of deposit	145	137
Financial investments designated at Fair Value Through Profit and Loss (FVTPL)	78,272	71,084
Derivative assets	39,407	39,941
Equity release mortgages	6,771	6,403
Financial investments mandatorily measured at FVTPL	46,178	46,344
Total financial investments at FVTPL	124,450	117,428
Derivative liabilities	39,469	40,095
Collateralised agreements and financing	11,945	6,519
Total financial liabilities	51,414	46,614
Net financial investments	73,036	70,814

Net financial investments increased from £71bn at 31 December 2024 to £73bn at 31 December 2025, primarily due to the new business written during 2025 offset by market movements.

A.3.1 Investment return

The table below provides an analysis of the investment return of the Rothesay Limited Group:

	2025 £m	2024 £m
Interest income on financial investments at fair value through profit or loss (FVTPL)	3,485	3,086
Unrealised gains/(losses) on financial investments at FVTPL	764	(4,929)
Realised (losses)/gains on financial investments at FVTPL	(493)	200
Investment management expenses	(71)	(56)
Total investment return/(loss)	3,685	(1,699)

A. Business and performance **continued**

A.3.2 Information about profit and losses in equity

Hedging reserve

Foreign currency exposure arises on the \$900m RT1 notes and \$325m Tier 2 notes, and the associated coupon payments. The risk arises from the fluctuation in exchange rates, which would cause volatility in the biannual coupon payments and the principal repayment.

As part of Rothesay's foreign currency risk management objective, cash flow hedges were put in place to remove the volatility caused by exchange rate movements, using bespoke fixed-for-fixed cross-currency swaps. The swaps are designated as hedges of probable forecasted transactions, being the foreign currency sterling costs of the coupons and principal payments.

Rothesay determines the existence of an economic relationship between the hedging instrument and the hedged item based on the currencies, interest rates, amounts and timing of their respective cash flows. Rothesay assesses whether the derivative designated in each hedging relationship is expected to be and has been effective in offsetting changes in cash flows of the hedged item under the hypothetical derivative method. It is Rothesay's policy to align the critical terms of the hedging instruments or the swaps with the hedged items or the USD notes. As the hedging instruments were bespoke derivatives, the hedge relationship is assessed to be highly effective and any ineffectiveness is expected to be immaterial. As allowed under IFRS 9, Rothesay continues to apply the hedge accounting requirements of IAS 39 as an accounting policy.

The fair value of the currency swap hedging instruments of the \$500m RT1 notes, \$400m RT1 notes and \$325m Tier 2 notes are (£15m), £10m and (£12m), respectively, as at 31 December 2025 (2024: £38m) with total nominal amounts of £911m as at 31 December 2025 (2024: £546m). The currency swaps are included in the derivative assets and derivative liabilities as part of the total financial investments and financial investment liabilities.

A.3.3 Information about investments in securitisations

Rothesay holds notes considered as securitisations from seven issuing programmes. These are included in corporate bonds and other corporate debt. RLP holds notes issued by wholly owned subsidiaries which were established in order to restructure assets for Matching Adjustment purposes.

A.4 Performance of other activities

Rothesay does not have any other material activities.

A.5 Any other information

Commonhold and Leasehold Reform Bill

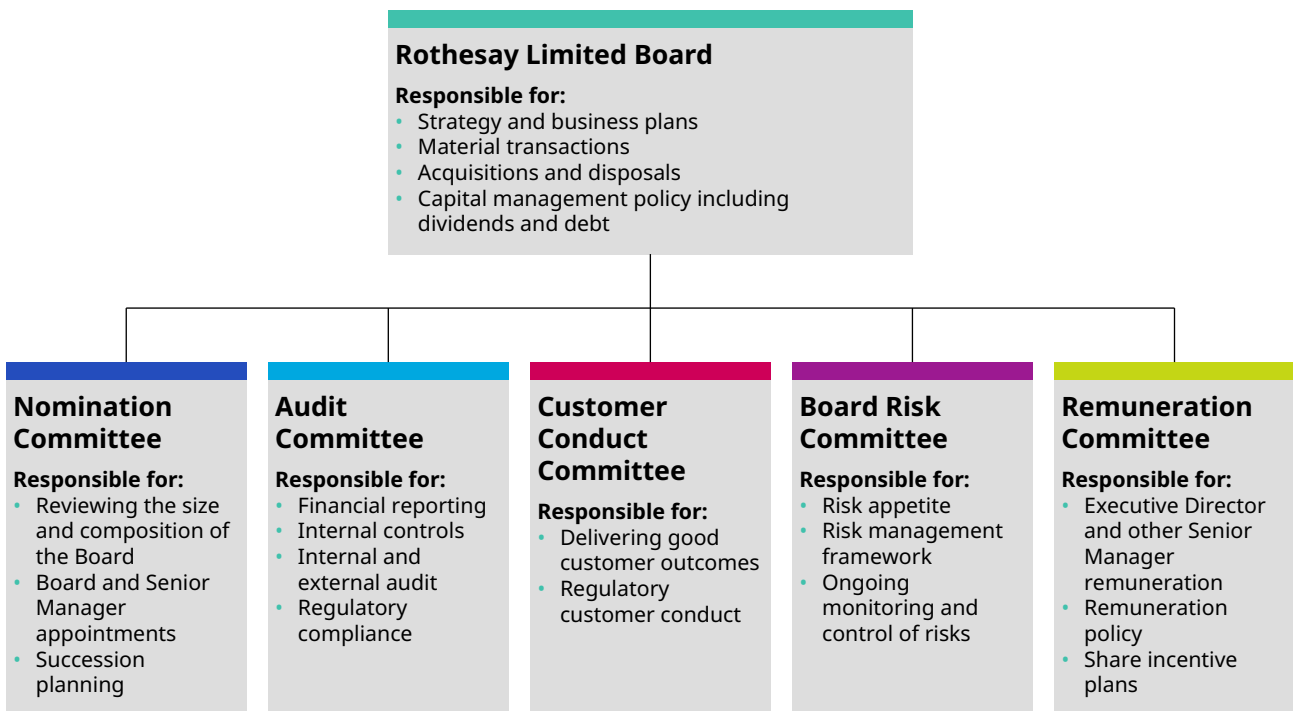

On 27 January 2026, the Government introduced a draft Commonhold and Leasehold Reform Bill which proposed capping residential ground rents at £250 per annum from 2028, reducing to "a peppercorn", or zero, after 40 years. Should the proposed changes be enacted as anticipated in final legislation, the write down in the fair value of Rothesay's relevant assets as at 31 December 2025 is estimated to be £313m with a resultant increase in the value of our liabilities, prior to management actions. Rothesay is undertaking a range of management actions to mitigate the impact of the proposed cap, including mitigation of the impact on the value of our liabilities.

B. System of governance

B.1 General information on the system of governance

B.1.1 Corporate governance

Rothesay's governance structure means that decisions can be made quickly and efficiently whilst ensuring that there is robust oversight. A strong Board with an effective committee structure is a key component of the governance framework of Rothesay. We believe that the system of governance continues to be appropriate given the nature, scale and complexity of the risk inherent in the business. Rothesay's Board Committee structure as at 31 December 2025 is outlined below:

The Boards comprise a combination of Executives, Directors appointed by the shareholders of Rothesay Limited and Non-Executive Directors, eight of whom are independent Non-Executive Directors (INEDs) and meet on a regular basis. The Board Committees comprise a combination of Directors appointed by the shareholders of Rothesay Limited and INEDs and meet on a regular basis.

As a relatively simple group, Rothesay applies all of our risk management, internal control systems and reporting procedures at a Group level and they are therefore applied consistently across all entities in the Group including RLP.

Group controls and procedures are supplemented as required by specific requirements for Riverton Home Finance Limited and the non-UK entities.

The Board of Rothesay Limited

The Board has responsibilities to shareholders, policyholders, the regulators, employees and other stakeholders for the overall performance of Rothesay. The Board's role is to provide oversight and direction to the senior management team and to ensure that there is an appropriate risk and control framework for Rothesay. More information on stakeholder engagement can be found in the Rothesay Limited Annual Report Stakeholder engagement section.

B. System of governance **continued**

The Board has a schedule of matters reserved for its consideration and approval, including:

- Changes to the rights of shareholders.
- Issuance of new equity or debt.
- Material changes to the business strategy of Rothesay.
- Material acquisitions or disposals.

Board Committees

The Board is supported by the Audit Committee, the Board Risk Committee, the Customer Conduct Committee, the Nomination Committee and the Remuneration Committee.

During 2025, the following changes to the Board took place:

- Bruce Carnegie-Brown was appointed as an independent Non-Executive Director and Chair Designate on 1 May 2025 and as Chair on 1 July 2025.
- Addy Loudiadis stood down from the Board on 3 April 2025.
- Naguib Kheraj stood down from the Board on 30 June 2025.

Changes in the Committees during the year were as follows:

- Nomination Committee
 - Addy Loudiadis resigned on 3 April 2025.
 - Naguib Kheraj resigned as Chair on 30 June 2025.
 - Bruce Carnegie-Brown was appointed Chair on 1 July 2025.
- Remuneration Committee
 - Ed Giera joined effective 1 March 2025.
 - Naguib Kheraj resigned as Chair on 30 June 2025.
 - Bruce Carnegie-Brown was appointed Chair on 1 July 2025.
- Board Risk Committee
 - Naguib Kheraj resigned on 30 June 2025.
 - Lisa Arnold joined effective 1 July 2025.
 - Terry Miller joined effective 1 December 2025.

Terms of reference for the Committees can be found at www.rothesay.com/about-us/environmental-social-governance/our-reports-and-governance/.

Nomination Committee

The Nomination Committee is responsible for monitoring the balance of skills, knowledge, experience, independence and diversity on the Board, identifying and recommending Board, Board Committee and certain senior management appointments to the boards of the various Group entities, as appropriate, and monitoring succession plans for the Executive Directors and the development plans of senior management within Rothesay.

The responsibilities of the Committee include reviewing the structure, size and composition of the Board of Directors, identifying and nominating candidates to fill Board vacancies as and when they arise, and approving certain senior management appointments.

The Committee is composed of Non-Executive Directors with an appropriate mix of expertise and experience and a majority of independent Non-Executive Directors. The other shareholder Directors were also invited to attend Committee meetings.

Audit Committee

The Committee is responsible for assisting the Board in fulfilling its oversight responsibilities for the financial reporting process, the system of internal control, the internal and external audit processes and Rothesay's process for monitoring compliance with laws and regulations and the business principles.

The Committee has unrestricted access to management and external advisers to help discharge its duties. It is satisfied that in 2025 it received adequate, reliable and timely information to perform its responsibilities effectively.

The Committee is composed of only independent Non-Executive Directors with an appropriate mix of expertise and experience.

B. System of governance **continued**

Customer Conduct Committee

The Committee is responsible for ensuring the delivery of good outcomes for customers and that clients and counterparties are treated fairly by us, as well as overseeing Rothesay's approach to regulatory conduct of consumer risk.

The Committee is composed solely of independent Non-Executive Directors with an appropriate mix of expertise and experience. The Chairman of the Board, CEO, CFO, Chief Operating Officer, Chief Auditor, Chief Compliance Officer and General Counsel (who chairs the Executive Customer Committee) also regularly attended Committee meetings. Other members of management were also invited to attend as appropriate, including to present reports.

Board Risk Committee

The Committee's primary responsibilities are the ongoing monitoring and control of all risks associated with the activities of Rothesay, within the parameters set by the Board and as set out in the risk and investment policies of Rothesay.

The Committee is also responsible for the oversight of the Executive Risk Committee (ERC) and its sub-committees, which are responsible for the ongoing monitoring and control of all financial risks, insurance risks and operational risks associated with the activities of Rothesay. The ERC has 19 members and is chaired by the Chief Risk Officer.

The Committee is composed of only independent Non-Executive Directors with an appropriate mix of expertise and experience.

Remuneration Committee

The Committee is responsible for reviewing and making recommendations to the Board regarding the remuneration policy of Rothesay and for reviewing compliance with the policy in so far as it relates to senior managers and other employees. Within the context of the policy, the Committee is specifically responsible for making recommendations for the remuneration packages of the independent Non-Executive Directors, Executive Directors and other senior managers of Rothesay. The Committee is further responsible for monitoring the overall level and structure of remuneration for the wider population.

The Committee is composed solely of Non-Executive Directors with an appropriate mix of expertise and experience. Membership includes representation from Rothesay's shareholders facilitating the close alignment of long-term interests. The independent Non-Executive Directors form a majority. The CEO and CFO also regularly attended part of Committee meetings as appropriate and relevant.

Deloitte was engaged to provide independent advice on remuneration. The advice provided included benchmarking, independent input and industry insights, as well as attendance at Committee meetings as appropriate and relevant.

Executive Management Committee

The Executive Management Committee is chaired by the Chief Executive Officer of Rothesay and its membership includes senior members of appropriate business and control units. The Committee has been delegated, by the Boards of Rothesay, the powers of day-to-day oversight and management of the business and affairs of Rothesay. The Committee is accountable for business standards and practices, including risk management.

B.1.2 Material changes in the governance structure

The systems of governance are monitored on an ongoing basis to ensure that they remain robust and appropriate for the size of the organisation and the breadth of Rothesay's activities.

B. System of governance continued

B.1.3 Remuneration policies and practices

Rothesay's remuneration policy is intended to:

- Promote sound and effective risk management.
- Align individuals' incentives with multi-year performance.
- Discourage excessive or concentrated risk-taking.
- Allow Rothesay to attract and retain proven talent.
- Align aggregate remuneration with the performance of Rothesay as a whole and encourage teamwork.

This is achieved by ensuring that variable remuneration is linked to performance across a range of financial and non-financial metrics. The CRO and CCO provide input to the Committee and financial metrics are disregarded when evaluating the performance of second and third-line employees. Considerable attention is paid to non-financial matters in assessing performance.

Remuneration packages combine a base salary, cash bonuses, a deferred equity award plan and for some employees a long-term stock appreciation rights plan (the SARs plan). The SARs plan provides the right to receive the upside on a fixed proportion of an agreed value of Rothesay shares over a defined time horizon, paid out in cash, subject to achievement of returns above an agreed hurdle.

The remuneration policy ensures that the deferred equity award plan stock vests and is delivered over several years. Any bonus that has been deferred is capable of a downwards adjustment or forfeiture and the rules of the deferred equity award plan and the SARs plan ensure that equity and cash awarded in the future can be clawed back even after vesting.

Pension schemes

Rothesay operates a defined contribution pension scheme and contributions to the scheme are charged to the statement of comprehensive income as they accrue.

B.1.4 Material transactions with related parties

During 2025, Rothesay entered into various transactions with fellow participating interests which are subject to common control from the same source.

Key management personnel comprise the Directors of the Company, Directors of subsidiary undertakings and certain members of senior management. There are no material transactions between Rothesay and its key management personnel other than the transactions discussed below:

Transactions with Key Management Personnel	2025 £m	2024 £m
Salaries, bonus and other employee benefits	32	32
Equity-based compensation payments	39	27
Pension costs	1	1
Total transactions	72	60

On 28 March 2025, members of key management personnel and their families sold 481,834 B ordinary shares to the employment benefit trust for consideration of £2.1m. During March 2025, Rothesay operated a Share Acquisition Facility for employees and Directors. 327,893 shares were acquired by key management personnel from the Employee Benefit Trust (EBT) pursuant to the Share Acquisition Facility for a consideration of £1.5m. On 28 March 2024, members of key management personnel and their families sold 93,007 B ordinary shares to the employment benefit trust for a consideration of £0.4m.

B. System of governance **continued**

B.1.5 Authority, resourcing and independence of control functions

The operation of the control functions is described in the following sections:

- Risk management – Section B.3.
- Compliance – Section B.4.2.
- Internal Audit function – Section B.5.
- Actuarial function – Section B.6.

The CRO, Chief Compliance Officer and Chief Auditor all have direct access to the relevant governing bodies, including private sessions without management present, which helps ensure that these key function holders have appropriate authority, access to resources and independence.

B.2 Fit and proper requirements

The FCA Handbook and PRA Rulebook require firms to ensure that anyone carrying on a Senior Management function or Certification function is fit and proper to perform their role. This requirement applies to all Non-Executive Directors, including those who are not classed as Senior Managers according to the FCA definitions.

Rothesay's Fit and Proper Policy is updated on at least an annual basis, to ensure ongoing compliance with the fitness and propriety requirements of the UK Senior Managers & Certification Regime (SMCR).

The Fit and Proper Policy and Rothesay's SMCR Framework set Rothesay's standards, systems and controls to identify, monitor and report:

- Those individuals who fall within the scope of the fitness and propriety requirements;
- Individual designations under the regime;
- How fitness and propriety is assessed for both new starters and on an ongoing basis; and
- The governance arrangements in relation to individuals being approved as being fit and proper.

The fitness and propriety assessment includes Rothesay's requirements concerning skills, knowledge and expertise applicable to persons who effectively run the business.

Rothesay's assessments of individuals' fitness and propriety reflect the SMCR fit and proper requirements, namely:

- Financial soundness;
- Honesty, integrity and reputation; and
- Competence and capability.

In addition, the Nomination Committee ensures that the Boards collectively possess appropriate qualifications, experience and knowledge.

Rothesay employs the following procedures to assess fitness and propriety:

- Performance against the applicable PRA Conduct Standards and FCA Conduct Rules;
- Performance against internal policies and procedures;
- Disclosure and Barring Service checks;
- Credit checks;
- Social media checks;
- Review of regulatory references;
- Review of training completion;
- Directorship search;
- Annual performance reviews and assessments; and
- Self-attestation annually.

In addition, the Chief Compliance Officer and SMCR Legal Regulatory Lead undertake individual review sessions with each of the Directors at least annually.

B. System of governance **continued**

B.3 Risk management system including the own risk and solvency assessment

B.3.1 Risk management framework

Rothesay has a Risk Management Framework (RMF) which is aligned to the 'three lines of defence model'. Fundamental to this is that every employee knows how they contribute to the effective identification, management, mitigation and monitoring of all types of risks.

The RMF ensures that accountabilities and responsibilities are clearly agreed and documented, and that there are appropriate checks and balances, including segregation of responsibilities.

The 'three lines of defence' model is widely used in financial services, and sets the boundaries between the different areas, making sure that there are no gaps in risk management or unexpected overlaps in accountability.

First line of defence Risk Owners

Day-to-day risk management is delegated from the Board to the Chief Executive Officer (CEO) and, through a system of delegated authorities, to business managers. Rothesay also makes the distinction between:

- the risk-taking functions, including investment and new business origination; and
- the first line control functions, who are responsible for ensuring the integrity of Rothesay's operations and reporting. These include Operations, Finance and Legal.

Second line of defence Risk Oversight

Design and maintenance of the risk management framework as well as risk oversight is provided by the Chief Risk Officer (CRO), his team, the Compliance function and risk management committees.

Third line of defence Risk Assurance

Internal Audit provides the Board and Executive with comprehensive, independent, objective assurance over governance, risk management and internal control.

B. System of governance continued

How we manage risk

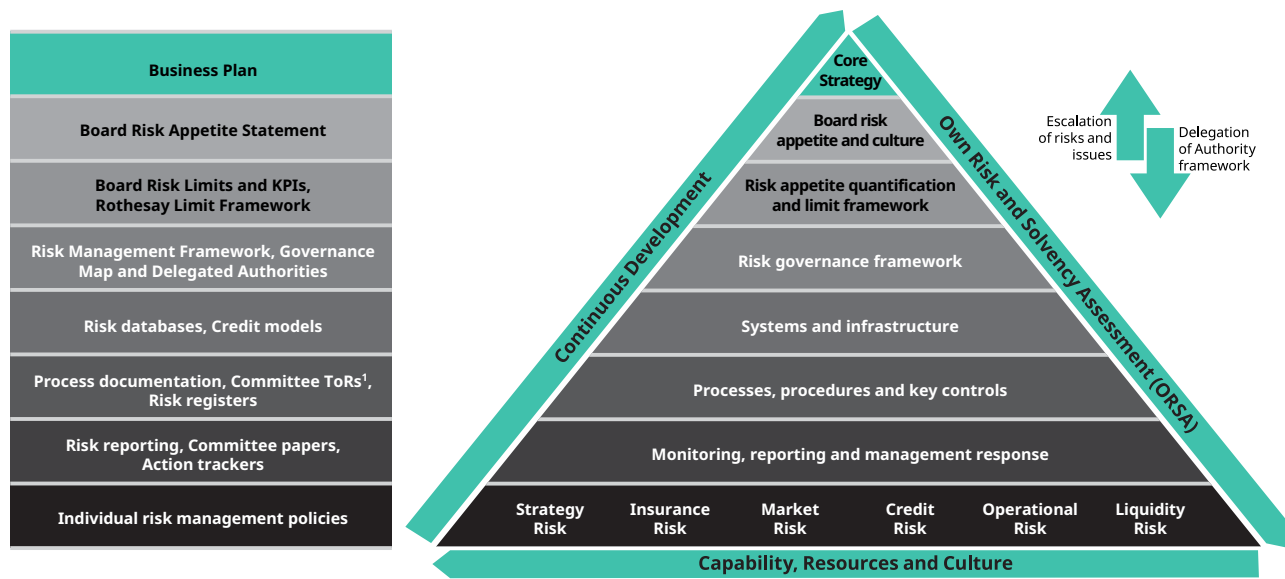

Rothesay's risk management principles are driven by the key objectives of the business:

- To ensure that our liabilities to policyholders can be met in a full and timely manner.
- To ensure that our policyholders and mortgage customers receive excellent customer service.
- To maintain our financial strength and capitalisation.
- To produce stable returns from our in-force business.
- To protect and increase the value of our shareholders' investment.
- To safeguard Rothesay's reputation.

To do this we have a well-established process of identifying, managing and monitoring risks on a continuous basis. This allows Rothesay to make rapid, informed decisions to manage through adverse conditions, as well as ensuring that we are able to invest appropriately where the risk/reward metrics are favourable.

The risk management framework is designed to ensure that:

- Risks are well understood and can be explained to all stakeholders.
- Risk management and business strategy are aligned.
- All employees are aware of their individual responsibilities.
- Risks are monitored and managed in accordance with defined risk appetites.

1. ToRs - Terms of Reference.

Risk management is a continuous process and the risks to which Rothesay is exposed change over time. The framework is designed to be responsive and is regularly reviewed to ensure that it remains highly effective. We have continued to invest in the Risk function, but we have always recognised that effective risk management starts with the employees who manage risks day in and day out, and so we ensure effective communication between teams, and that systems, data and other tools are providing the information to enable employees to make timely informed decisions – with risk management at the core of these decisions.

Risks can be quantifiable, such as market risks, or non-quantifiable such as reputational or strategic risks, or could be a mix of both. Some risks have been a core part of the financial landscape for decades or more, while others, such as cyber risk, have emerged more recently and it requires an agile risk framework to adapt to these. Risks can materialise rapidly, such as a change in market conditions, or could emerge slowly over a number of years such as the outlook for life expectancy.

B. System of governance **continued**

Board risk appetite and culture

Rothesay's risk appetite expresses the types of risk that Rothesay is willing to take in pursuing strategic objectives. The Board's risk appetite sets the tone for the culture of risk management throughout the organisation.

Our strategic approach is to de-risk our business in order to achieve attractive risk-adjusted returns. We also aim to protect regulatory surplus, manage liquidity and minimise balance sheet volatility.

Risk taking is limited to circumstances where we believe that we fully comprehend the inherent and residual risks, where we are able to manage them within prudent, observable levels and where incurring the risks provides sufficient value to our stakeholders.

We aim to substantially mitigate the financial risks in our portfolio in order to protect policyholders, lock in value and to safeguard capital surplus such that excess capital may be invested into attractive risk-adjusted new business opportunities where Rothesay believes it has a comparative advantage.

Our risk appetite statement sets out the types of risk that we are willing to be exposed to in order to meet our strategic objectives. They are categorised as desired, tolerated or undesired.

B. System of governance **continued**

Risk preference	Description	Examples
Desired	<p>Desired risks are those that we need to seek directly in order to deliver our core strategic goals. We will actively seek to take on these risks because taken together they are expected to deliver a good risk-adjusted return. These are also risks we believe we have the capability and capacity to manage effectively within risk appetite limits.</p>	<p>Most Insurance Risks (given that our key business line is writing annuities), some Credit Risks (given our desire to make a return through backing annuities with credit assets) and some Strategy Risks (given our clearly defined strategy).</p>
Tolerated	<p>Tolerated risks are those that we incur indirectly as a result of implementing our core strategy, and where we may be willing to accept some exposure.</p> <p>We will invest to ensure that these risks are adequately managed. We may seek to partially or fully reduce these risks depending on relative risk-adjusted returns.</p>	<p>Tolerated risks therefore mostly relate to Market Risks, where our business model naturally exposes us to these risks but we seek to reduce or hedge them partially or fully.</p>
Undesired	<p>Undesired risks are those that we incur indirectly as a result of implementing our core strategy, and where we would ideally seek to fully eliminate the exposure.</p> <p>These typically include risks where there is no compensation for holding the risk e.g. Operational Risk, but also risk that we do not feel sufficiently competent to manage.</p> <p>We are willing to invest in order to avoid or manage these risks as far as possible. Even where significant action is taken, some residual risk may be unavoidable.</p>	<p>Undesired risks include most Liquidity Risks (as we have no desire to fail to pay our policyholders and counterparties), and Operational Risks (as these are unrewarded).</p>

Risk appetite quantification and limit framework

The risk limit framework is intended to ensure the stability of earnings and solvency position of the business. Risk appetite is translated into quantifiable limits and early warning triggers that prompt management action to avoid our risk exposures breaching the Board's risk appetite. Limits exist in relation to market, credit, counterparty, liquidity, demographic and longevity risks and are sized with reference to our overall risk appetite and capital position. Limits are constantly reviewed and reported against.

Risk governance framework

Rothesay's risk governance arrangements strengthen the risk-taking and risk management of the business by adding challenge, oversight and independent assurance. This framework supports compliance with the Senior Managers & Certification Regime.

The Board is responsible for oversight of the management of exposure to risks and is supported by the Board Risk Committee whose membership consists entirely of Non-Executive Directors and looks to ensure that the management of the business is conducted within the delegated risk framework from the main Board. This model of separation of responsibilities is also aligned to the Senior Managers & Certification Regime (SMCR), which ensures that individuals have very clear allocation of responsibilities.

B. System of governance **continued**

Building on this model, the RMF then adds the detail such that risk management ownership, responsibilities and processes are clear. This both informs and is directed by Rothesay's business strategy. The foundation of the RMF is the clear identification of the risks that Rothesay faces. From this, the RMF can then go on to define detailed aspects including:

- Risk appetites and risk limits.
- How risks should be measured and reported on.
- Processes for controlling or managing risks.
- Individual accountability for risk topics.

In order to clearly identify risks, Rothesay has defined a Risk Taxonomy, which is a consistent way of describing and sub-dividing risks consistently across Rothesay and between time periods. This is regularly reviewed to ensure that it is complete.

Systems and infrastructure

Rothesay operates an integrated system infrastructure which captures all assets and liabilities centrally and provides us with the capability to report and monitor risk daily at both the portfolio and the individual transaction level. Close coordination of underwriting, reinsurance, investment and risk hedging functions ensures risk management is central to all aspects of the business, and that new business pricing reflects latest market conditions, hedging costs and investment opportunities, as well as comprehensive liability analysis.

Policies, processes, procedures and key controls

Rothesay has developed appropriate processes and documented procedures, appropriate controls and other risk mitigation techniques in order to effectively manage risks. The policy framework ensures that an appropriate suite of risk management policies is maintained which sets out the principles and standards for risk identification, measurement, mitigation, control and monitoring.

Monitoring, reporting and management response

Our risk exposures against risk appetite as well as management actions are monitored on a continuous basis to confirm that our risk mitigations are effective. All monitoring is reported to oversight committees and individuals with responsibility for risk management in order to inform business decisions. Monitoring considers both those risks to which Rothesay is currently exposed, in addition to emerging risks that may impact Rothesay in the future.

Capability, resources and risk culture

Rothesay seeks to attract and retain the highest quality talent in the industry. The effectiveness of our risk management depends upon the high quality of our people and the strong risk culture and risk management practices.

We are committed to maintaining the highest standards of integrity, transparency and accountability. Good conduct is fundamental to our purpose, strategy and how we operate, and is also good business practice. A good culture is one where people do the right thing, feel empowered to speak up if something does not look right and know they can rely on support from management. Training is conducted so that everyone has an understanding of Rothesay's risk culture and the importance of each individual in order to maintain standards and manage risk effectively.

Rothesay's risk culture is set from the top down, with the Board and senior management ensuring that risk management is embedded throughout the organisation, and demonstrating day-to-day how risk management informs decisions big and small. Risk management and conduct are an integral part of Rothesay's performance review process, ensuring that all Rothesay employees are held to the highest standards.

B. System of governance **continued**

B.3.2 Own Risk and Solvency Assessment (ORSA)

The ORSA represents a key component of Rothesay's risk management and strategic planning framework, requiring the risk profile of Rothesay to be thoroughly understood, and the adequacy of capital resources given to this risk profile to be assessed, both today, and also on a forward-looking basis. Capital adequacy is assessed under prevailing market conditions and also under stressed conditions, where an onerous suite of market and business model stresses are applied. A single Group-wide ORSA is prepared covering both RL and RLP.

The ORSA process includes an assessment of our capital requirements over the next 12 months, which is based on Rothesay's full internal model which has been in use since 2023. The full internal model comprehensively models all material quantifiable risks present on Rothesay's balance sheet.

This analysis is supplemented by a suite of portfolio stress tests which target key risks present on the balance sheet. As such, the stress tests performed will vary over time as the composition of the balance sheet, and hence risk profile of Rothesay, changes. The results of the stress testing analysis form a key input to risk management and investment decisions. Such stress testing also considers areas of correlated risk across the balance sheet, such as property risk or unsecured credit exposures.

A further important component of the ORSA process is the forward-looking risk assessment. We start by identifying circumstances which could increase the likelihood of business failure and could therefore cause the market to lose confidence in the firm. This can happen even before our regulatory capital position has fallen below minimum statutory requirements and can lead to difficulties in raising capital or transacting business with new and existing counterparties. The impact of the selected scenarios on our business projections, including our solvency position, and IFRS earnings, are then assessed, allowing potential management actions to be identified and explored. Furthermore, scenarios that may render our business non-viable are explored as part of a reverse stress testing exercise, allowing management actions to be developed where appropriate.

Whilst an annual ORSA report is produced, the ORSA process, including stress testing, is continuous and helps inform our business strategy and capital requirements over time. Furthermore, ad hoc ORSA exercises may be conducted if a material change in the risk profile of Rothesay was to take place in between the annual reviews. The Boards of Rothesay are involved throughout the ORSA process, from setting Rothesay's risk appetite, to discussing the suite of stresses that should be applied to our business model and reviewing the output.

Governance in relation to the ORSA

The business and affairs of RLP and Rothesay Limited are governed by their respective Boards. The Boards provide direction and oversight, establish the strategic direction, oversee their performance and review and approve the Companies' accounts. In particular, the Boards have overall responsibility for the ORSA.

The Boards are supported by the Board Risk Committee (BRC) and Audit Committee:

- The BRC is responsible for reviewing the key assumptions underlying the ORSA assessment and other economic capital calculations.
- The Audit Committee has a duty to review the effectiveness of the system for risk governance and monitoring, and therefore review the process surrounding the production of the ORSA.

The Finance Committee, a sub-committee of the Executive Management Committee, is involved in the detailed review and challenge of the analysis underlying the ORSA, and the Executive Risk Committee oversees the entire ORSA process at management level.

B. System of governance **continued**

B.3.3 Full internal model

Governance

The Board is accountable for ensuring the ongoing appropriateness of the design and operation of the internal model. The following bodies support the Board in their governance of the internal model. Their responsibilities cover the development of new models, their ongoing use and review, and changes to the existing model.

The BRC assists the Board in the ongoing monitoring of the internal model, including accountability for model reviews and the classification, approval and implementation of model changes. The Board Risk Committee is accountable for conducting model validation and delegates this responsibility to the CRO.

The Audit Committee is responsible for overseeing the external reporting of the internal model results.

The CRO ensures that the model is appropriate for its purpose, functions as expected and complies with all relevant regulatory requirements, and formerly attests to this annually, including in 2025.

The Executive Risk Committee is responsible for the ongoing monitoring and control of risks associated with the activities of Rothesay. A number of duties and responsibilities are delegated to the Finance Committee. The Finance Committee is responsible for the approval of calibrations and methodologies for the internal model and other financial metrics. The Finance Committee plays an active role in the model development, use and change on an ongoing basis. This includes reviewing relevant internal model reports and management information produced by first and second line functions across the business.

The day-to-day running of the internal model is performed by the Actuarial function. The process and results are reviewed and monitored by the Risk function.

Material changes to internal model governance

No material changes to internal model governance were made in the year.

Validation approach

The Full Internal Model (FIM) is subject to a regular cycle of validation and ongoing performance monitoring. The purpose of validation is:

- To provide the management and Board of Rothesay with confidence that the internal model reflects Rothesay's risk profile.
- To demonstrate to supervisory authorities that the capital requirements calculated by the FIM are appropriate.
- To provide assurance that the FIM is operating effectively, and can be relied upon at all times.
- To provide assurance that the inputs, methodologies and outputs of the FIM are representative of Rothesay's risk profile.
- To provide this assurance to the management and Boards of Rothesay from an independent perspective.
- To identify model shortcomings and/or identify potential improvements to the FIM that can then be addressed for the next review cycle.

Validation is an ongoing activity which takes different forms over the life cycle of the FIM. The model was subject to full initial validation before the application for approval was made. Thereafter, types of validation include:

- Validation of new internal model components and model changes.
- Regular validation as part of the ongoing validation cycle.
- Other ad hoc validation, for example at the request of the Board or BRC.

A range of processes and methods are used to validate the internal model. These are both quantitative and qualitative tests and include certain tests that are compulsory (under Solvency II), subject to their appropriateness and guidance on the use of proportionality and materiality.

The CRO is responsible for validation and for ensuring that the team undertaking the work is suitably qualified and independent from the development of the model. Where required, external resources are used to provide additional independent validation capabilities.

B. System of governance **continued**

B.3.4 Use of external assessments

External credit ratings are used, where available, both when calculating the Matching Adjustment and also to determine the spread risk component of the SCR for certain assets. The second line credit team perform a review of such ratings to ensure that the methodologies adopted by the relevant External Credit Assessment Institutions (ECAIs) are reasonable. Circumstances where ratings require review by the credit team are formally documented. If a rating is assessed to not be appropriate, it may be downgraded in order to ensure that an appropriate quantum of capital is allocated to the position.

B.3.5 Sensitivity of technical provisions

The extrapolation of the risk-free interest rate term structure is not material, as the Group's liabilities are predominantly denominated in sterling and have minimal sensitivity to tenors beyond the 50-year "last liquid point" at which extrapolation of the sterling risk-free interest rate term structure begins. Further, the great majority of the Group's liabilities are held in the Matching Adjustment Portfolio and consequently have only a second-order sensitivity to movements in the risk-free interest rate term structure.

The Matching Adjustment is discussed in Section D.2.1 under discount rate.

B.3.6 Material non-SCR risks

A review of the appropriateness of the FIM, given our risk profile, is conducted as part of the annual ORSA exercise. Ad hoc assessments may also be triggered by material changes in our risk profile. In summary, this exercise demonstrates that the internal model remains appropriately calibrated and covers all material quantifiable risks for which it is appropriate to hold capital as a mitigant.

The Group is exposed to liquidity risk against which no capital is held but which is carefully monitored and managed (see Section C.4).

B.3.7 Group risks

Rothesay does not consider there to be any material risks at a Group level which vary from entity level risks.

B.4 Internal control system

B.4.1 Internal control system

Rothesay's internal control system is designed to provide reasonable assurance that our financial reporting is reliable, is compliant with applicable laws and regulations and our operations are effectively controlled. The Board is ultimately responsible for overseeing and maintaining the adequacy and effectiveness of the risk management and internal control systems. In practice, the oversight and management of these systems necessarily involves participation of the Board and its sub-committees, Senior Management and all three lines of defence.

Primary responsibility for ensuring day-to-day oversight of the internal control system lies with Rothesay's Senior Managers (SMFs) and Key Function Holders. Rothesay promotes the importance of appropriate internal controls by:

- i) ensuring that all personnel are aware of their role in the internal control system through, for example, Statements of Responsibilities;
- ii) ensuring a consistent implementation of the internal control systems across Rothesay;
- iii) establishing, monitoring and reporting mechanisms for decision-making processes; and
- iv) continually reviewing the adequacy of the internal control system through risk and controls self-assessment exercises.

Please see Section B.3 above for a description of the internal control system relating to the Risk function.

B. System of governance **continued**

B.4.2 Compliance

Compliance is an independent second line control function led by the Chief Compliance Officer (CCO). Its role, remit and authority flow from the CCO's accountabilities in carrying on FCA-designated Senior Manager Functions SMF16 (Compliance oversight function) and SMF17 (Money laundering reporting function). The Money Laundering Reporting Officer (MLRO) role includes the following responsibilities:

- Nominated Officer for Rothesay's UK Legal entities;
- FCA-approved senior management function holder for Rothesay Life Plc;
- Rothesay Asset Management North America's designated Compliance Officer.

The CCO reports to Rothesay's General Counsel and provides regular reports to Executive Committees, the Customer Conduct Committee, Audit Committee and the Board.

The Compliance function's strategic objective is to enable and protect Rothesay's business, employees and customers. Compliance has four operational objectives that support its strategic objective.

1. Promote and maintain the highest cultural standards.
2. Provide decisive assurance.
3. Deliver independent, commercially-focused advice.
4. Escalate issues quickly and engage stakeholders transparently.

An employee-facing Compliance Manual and policy framework sets Rothesay's standards and expectations as well as individuals' personal obligations to support a positive compliance culture at all levels of the business. Policies are reviewed and updated on an annual basis or as a result of regulatory change.

B. System of governance **continued**

B.5 Internal Audit function

Internal Audit (IA) provides independent and objective assurance to the Audit Committee over the effectiveness of Rothesay's systems of governance, risk management and internal control. This helps the Rothesay Group accomplish its purpose and protect its assets, reputation and sustainability. It also ensures that risks to its customers and business are managed appropriately, in line with the risk appetite set by the Board.

To maintain the function's independence and objectivity, the Chief Auditor (CA) reports directly to the Chair of the Audit Committee. The Audit Committee has responsibility for approving the appointment (and removal) of the CA. The CA liaises with the CEO on day-to-day operations and the CA attends Executive Committee meetings. For administrative purposes, the CA reports to the CEO. IA has no direct operational responsibility or authority over any of the business activities, risks and associated internal controls that it assesses.

IA maintains methodologies and practices that seek to adhere to the mandatory elements of The Institute of Internal Auditors' International Professional Practices Framework, which are the Global Internal Audit Standards and Topical Requirements. These help to ensure the function is independently positioned and free from undue influence and committed to making objective assessments. An Internal Audit Charter is in place setting out the function's role, authority, and independence. The Internal Audit Charter, which sets out the functions mandate and is reviewed annually, was last approved by the Audit Committee in December 2025.

IA undertakes risk-based assurance work in accordance with an annual plan approved and monitored by the Audit Committee. The CA regularly reports to the Audit Committee on IA's activities, as well as management's progress in addressing findings from its assurance work, and on the performance of the function overall. The CA regularly attends Board Risk Committee meetings and Executive Committee to ensure IA's work is adequately informed, supported and communicated.

IA maintains a quality assurance and improvement programme which includes continuous external quality assurance activity undertaken by a third party; internal quality control monitoring; and annual self-evaluation against the UK Internal Audit Code of Practice. Quality assurance and improvement feedback is also gathered via stakeholder surveys. An external quality assessment is undertaken every five years in accordance with IIA standards. The next one is due in 2027.

B.6 Actuarial function

The Chief Actuary reports to the CRO and also has responsibility for the oversight of insurance risk and internal model governance. The Chief Actuary and the wider actuarial function are responsible for a range of activities, including:

- co-ordinating the calculation of technical provisions, including:
 - ensuring the appropriateness of methodologies, models and assumptions;
 - comparing the best estimates against experience;
 - assessing the adequacy and quality of data used; and
 - informing the Board of the reliability of the calculation.
- opining on the underwriting policy and adequacy of reinsurance arrangements; and
- contributing to the effective implementation of the risk management system, including:
 - the modelling of risk including in respect of the MCR/SCR calculations;
 - stress and scenario testing including within the ORSA; and
 - Recovery and Resolution Planning

In addition to a number of direct reports, the Chief Actuary is supported by:

- the Model Risk Management team which reports to the CRO;
- the capital and actuarial assurance teams which report to the CFO; and
- the longevity team, which reports to the Head of Asset and Liability Management.

The additional responsibilities of the Chief Actuary do not create conflicts of interest.

B. System of governance **continued**

B.7 Material Third Parties

With the exception of staff employed by Rothesay Asset Management North America LLC and Rothesay Asset Management Australia Pty Ltd, RPML employs all of Rothesay's management and staff and provides services to the other companies in the Group.

Rothesay has chosen to partner with third parties to provide some of our operational services and activities in order to take advantage of economies of scale and external expertise. Rothesay maintains oversight of these functions in line with our Vendor Management Policy. The following key functions are listed below:

- Pensions administration, including front line policyholder handling to Aptia UK, Capita Pension Solutions, WTW, Brightwell, and Procentia.
- Some risk software and some IT provision to Goldman Sachs.
- Certain IT services to Amazon Web Services and Microsoft Azure.
- Middle office operational activity (settlements and collateral management) to Northern Trust.
- UK payroll to Midland HR.
- International payroll to Vistra.
- Background checks for employees to First Advantage.

All of these providers have entities located within the UK or the EU (with the exception of the US and Australia payroll provider).

Rothesay has adopted a Vendor Management Policy, which is intended to establish a prudent Risk Management Framework in relation to the management of the outsourcing arrangements and ensure compliance with the relevant regulatory requirements. The policy covers the entire outsourcing life cycle, from identifying the need for outsourcing through relationship management, oversight to providing processes to effectively manage risk associated with outsourcing relationships, and ensuring we have adequate exit arrangements in place.

B.8 Any other information

There is no other material information on the system of governance.

C. Risk profile

Rothesay is a purpose-built annuity provider whose insurance operations are materially within the United Kingdom. Our strategic approach is to de-risk our business in order to achieve attractive risk-adjusted returns. We aim to protect regulatory surplus and minimise balance sheet volatility by hedging longevity risk and adopting a cautious approach to investment. For further information in relation to Rothesay's risk exposures and concentration, please refer to the Rothesay Limited Annual Report and Accounts.

The following table provides a breakdown of the pre-diversified SCR, split between risk categories. Insurance risk is mostly longevity risk, which reduced over 2025 mainly due to reinsurance transacted. Market risk is dominated by spread risk, i.e. the risk that credit spreads widen.

Composition of SCR (%)	2025	2024
Market risk	57	52
Insurance risk	24	28
Operational risk	12	12
Counterparty risk	7	8

The management of risk is central to the success of the business. Every employee knows that they are responsible for the identification and management of risk. Rothesay's governance arrangements strengthen this principle by adding challenge, oversight and independent assurance from the second and third lines of defence.

An overview of the risks associated with the business, including an outline of how they are each mitigated, is provided in this section of the SFCR.

Changes in Rothesay's risk profile

The geopolitical environment continues to show heightened uncertainty and volatility. In the UK, Labour came to power in 2024 and have been dealing with a set of material domestic and global challenges alongside limited financial flexibility. In the US, the Trump Administration's trade policy and use of tariffs has impacted global trade dynamics with increased costs and uncertainty for trading partners, consumers and companies. Globally, the geopolitical situation remains volatile with a number of conflicts continuing and new conflicts emerging. Inflationary pressures remain high, and global interest rates are elevated and remain subject to international developments and geopolitical impacts on government debt levels and inflation, respectively.

Against this backdrop, Rothesay has been patient and disciplined in writing new business and in investing its assets. During 2025, Rothesay continued to invest in a diverse range of assets, including residential mortgages and commercial ground rents, as well as maintaining holdings in higher quality assets including UK and non-UK government debt. Having a diversified asset portfolio means that Rothesay is not over-exposed to a single risk scenario.

Credit markets have remained strong, and we have continued to manage our exposures to ensure that the risk/reward metrics continue to be in line with our views, actively monitoring and managing potential downgrade risk. We have also continued to ensure that our asset portfolio is well-positioned with consideration of sustainability-related risks, including climate change. In June we released our Sustainability and Climate Reports, outlining our progress against our commitments, which include a Net Zero investment portfolio by 2050, with an interim goal of a 50% reduction in Carbon Intensity from 2020 to 2030.

Our market-leading risk management systems, including access to real-time information about our risk positions, have allowed us to respond quickly to market conditions, protecting the strength of our balance sheet and ensuring that we are able to continue to execute our business plans. Our ongoing focus on liquidity risk management means that the Group's liquidity position remained robust throughout 2025.

C. Risk profile **continued**

We continue to actively monitor mortality experience across our business, and there have been continued positive signs that mortality is returning to post-COVID normality, although there are continued pressures at an individual level as well as on the UK's National Health Service, as well as uncertain impacts on health and longevity from weight-loss drugs or other new technologies, as well as lifestyle factors. Therefore, we consider that there is heightened uncertainty as to the future path of longevity.

We have continued with our strategy to reinsure a material amount of longevity risk with high-quality reinsurance partners. All of our longevity reinsurance is written as unfunded, collateralised longevity swaps, where the counterparty risk is minimised.

Rothesay's operational risk profile continues to evolve, with the continued success of our project to move our IT systems onto a fully in-house platform, the launch of RothesayOne administration platform and the launch of Riverton, a direct lender within the Group. As a result we have continued to invest in our operational risk capabilities across all three lines of defence. We also continue to focus on operational resilience to ensure that we can prevent, respond to and recover from unexpected operational disruption and limit any impact on our customers.

In 2024, we established a dedicated Technology Risk Committee, and the increased focus on this risk was timely given both internal changes and the external technology risk landscape. Across 2025 we have seen a number of high-profile cyber events impacting firms, and this remains one of the most significant potential risks for UK financial services providers. We operate to high international standards, including maintaining ISO 27001 and ISO 22301 accreditation, demonstrating strong data protection capabilities and helping our policyholders to protect their data and privacy from scammers. We have additionally continued to invest in our systems and capabilities to protect the firm and our policyholders, including maturing our 24/7 Security Operations Centre and our supply chain security assessments.

While we are satisfied with the operation of our risk management framework over 2025, which has responded well to a series of evolving financial and non-financial risks, we are constantly reviewing and improving our risk management and risk reporting capabilities, ensuring that we are able to provide real-time risk analytics to enable effective risk-based decision making across Rothesay.

Emerging risks

We also invest in the identification, assessment, and management of emerging risks which have the potential to impact Rothesay across both the short and long term. Our approach ensures that evolving threats and opportunities are considered within our strategic and operational decision-making processes.

As mentioned previously, uncertainty and volatility remain defining features of the geopolitical environment, with shifts in US policy acting as a key driver. Rising trade protectionism, greater state intervention in markets, intensifying global competition, deregulation and ongoing and emerging global conflicts have all contributed, and continue to contribute, to the volatility.

We continue to monitor all the developments closely through our risk management framework to ensure that the portfolio remains appropriately diversified, resilient to stress, and aligned with our long-term risk appetite, and to ensure that where there are any potential new emergent features of the global financial system, we have appropriate and adequate tools in place to deal with any risks.

As well as geopolitical risk, the cyber threat landscape and Artificial Intelligence (AI) continue to present challenges and opportunities. In particular, the accelerating development and adoption of Generative and Agentic AI could enhance productivity and efficiency but also introduce or amplify potential risks such as data security, bias and flawed decisions due to hallucination. The Group remains focused on controlled innovation whilst maintaining the safe, responsible deployment of such technologies.

C. Risk profile **continued**

C.1 Insurance risk

Insurance risk is the risk of changes in the value of Rothesay's net position due to changes in the insurance contract liabilities. Insurance risk may occur either through changes in actual demographic experience or revised expectations of future experience. The main categories of insurance risk include the following:

- Demographic risk arises from current mortality or spouse/dependant experience being lighter than that assumed. The risk is hedged by external reinsurance.
- Longevity improvement risk represents the risk of future mortality rates improving at a faster rate than assumed. The risk is hedged by external reinsurance.
- Expense risk results from future expenses required to maintain the business being higher than expected. This risk is managed through budgeting and robust expense management.
- Data risk arises from the risk that the cost of correcting residual data errors exceeds the provisions held against this risk. This risk is managed through detailed due diligence, exclusion of known data issues and prudence in quantifying appropriate provisions.

Concentration of insurance risk

Rothesay's geographical concentration of insurance risks is written in the United Kingdom and within its long-term insurance annuities business segment. Rothesay's insurance and reinsurance contract liabilities are denominated in GBP.

The projection of annuity obligations used for pricing and reserving requires a number of actuarial assumptions to be made. Similar to other bulk annuity providers, the performance of Rothesay's business will primarily depend on the actual experience of mortality rates and longevity improvements. Systemic changes in mortality rates could arise, for example, from a cure for a major disease (e.g. cancer) being found in the near term.

Rothesay also needs to make a number of other assumptions, including the proportion of deferred and immediate annuitants that have a dependant eligible for contingent benefits, dependant's age and the proportion of deferred annuitants opting to take a proportion or all of their benefit at retirement (or before) as a lump sum.

Longevity and other demographic risks are mitigated through:

- Strict underwriting criteria and the use of reinsurance targeting a majority of insured lives. Assumptions used in the projections are determined using historic experience, rating models or reinsurance pricing. Given the nature of the larger bulk annuities that Rothesay typically writes, the assumptions used can generally be derived specifically from the population under consideration.
- All reinsurance contracts entered by Rothesay have been implemented through the use of unfunded longevity swaps where no initial premium outlay is required. 91% of longevity risk on an IFRS basis was hedged as at 31 December 2025 (2024: 90%).

As at 31 December 2025, the required capital for underwriting risk pre-diversification, based on Rothesay's Internal Model (classified as underwriting risk), is £1,473m (2024: £1,543m). This reduction is largely driven by the execution of additional reinsurance over the year. Please refer to QRT IR.25.04. Information on risk exposures and concentration on an IFRS basis is included in notes E and F of the Rothesay Limited Annual Report and Accounts.

C. Risk profile **continued**

C.2 Market risk

Market risk is the risk of changes in the value of Rothesay's net financial position due to changes in market prices. Financial investments are accounted for at fair value and, therefore, fluctuate on a daily basis. Certain liabilities are also exposed to market risk. Categories of market risk include the following:

- Interest rate risk arises from discounting cash flow mismatches across all future dates. Profits and losses are generated through changes in the level, slope and curvature of interest rate curves. The risk is hedged closely by matching assets and liabilities and by using interest rate swaps. Consideration is given to Rothesay's IFRS and solvency risk positions when determining the appropriate hedging strategy.
- Inflation rate risk results from mismatches in the index linkage of liabilities and assets. Profits and losses are generated through changes to the level, slope and curvature of inflation curves. The risk is hedged by closely matching assets and liabilities and by using inflation swaps.
- Currency rate risk results from mismatches in the denomination of liabilities and assets. Profits and losses are generated due to changes in the level of foreign exchange rates. The risk is hedged using spot foreign exchange and cross-currency swaps.
- Property risk results from investments that are secured on commercial or residential properties. In some instances, this risk may arise from the potential impact of climate change on properties (including the need to improve the carbon efficiency of buildings). Profits and losses may be generated by material movements in spot or forward property prices. This risk is mitigated through strict underwriting criteria, aggregate risk monitoring, consideration of sustainability risks and low loan-to-value limits. Where the property risk becomes more material than prudent allowance is made for this within the credit risk adjustment.

Rothesay manages market risk by diversifying exposures, controlling position sizes through limits and regular stress and scenario testing and establishing economic hedges in related securities, derivatives and insurance liabilities.

The tables below show sensitivities on an IFRS basis to movements in interest rates and inflation.

2025	Change in assumptions	Increase/ (Decrease) in PBT		Impact on equity	
		Gross £m	Net £m	Gross £m	Net £m
Interest rate	+100bps	(942)	(885)	(707)	(663)
Interest rate	-100bps	1,179	1,135	884	851
Inflation	+100bps	620	611	465	458
Inflation	-100bps	(503)	(492)	(377)	(369)

2024	Change in assumptions	Increase/ (Decrease) in PBT		Impact on equity	
		Gross £m	Net £m	Gross £m	Net £m
Interest rate	+100bps	(962)	(928)	(722)	(696)
Interest rate	+100bps	1,141	1,135	856	852
Inflation	-100bps	714	731	536	548
Inflation	-100bps	(554)	(562)	(415)	(422)

There was no change in the method used for deriving sensitivity information and significant variables during the year.

As at 31 December 2025 the required capital for market risk (including spread risk and concentration risk) pre-diversification is £3,502m (2024: £2,891m). Please refer to QRT IR.25.04 and Section E.4.

C. Risk profile continued

C.2.1 Concentration risk

Rothesay mitigates concentration risk by investing in a diversified portfolio of assets and, where positions are more concentrated, seeking appropriate collateral or other forms of security.

C.2.2 Prudent person principle

In line with the prudent person principle, and embedded within the investment policy, before investments are made consideration is given to a number of risk indicators to ensure that investments:

- are of a suitable quality and security to meet policyholder liabilities;
- are Matching Adjustment eligible (where relevant);
- the risks associated with the investment are well understood, can be modelled in our risk systems and are appropriately captured in our capital models;
- can be suitably valued. Where relevant, valuation uncertainty for new investments is considered;
- appropriately match liabilities by duration, currency and index-linkage;
- take account of the liquidity needs of Rothesay;
- meet concentration limits for individual assets and sector; and
- appropriate resources are in place to manage the investment over time.

By managing investments in-house, Rothesay is able to consider the impact of new investments on a list of defined risk indicators, including stress tests and the financial impact of sustainability factors, before investments are made. This assessment, along with consideration of the prudent person principle, is captured within the investment memos that are presented to the Investment Risk Committee or Executive Risk Committee (and Board Risk Committee where relevant) as part of the approval process for new issuers or asset classes.

C.3 Credit risk

Credit risk represents the potential for loss, or solvency deterioration, due to the default or deterioration in credit quality of a counterparty or an investment we hold. In some instances this risk may arise as a result of sustainability factors including climate change, for example the risk of stranded assets, potential litigation exposure or the impact of sustainability considerations, on a counterparty's assets and/or liabilities. Credit risk also arises from cash placed with banks or money market funds, collateralised financing transactions (i.e. resale and repurchase agreements) and receivables from third parties.

Management is responsible and accountable for managing credit risks within prescribed limits. Effective management of credit risk requires disciplined underwriting, accurate and timely information, strong collateral management, a high level of communication and knowledge of customers, countries, industries and products. We continue to actively monitor and manage potential downgrade risk across the investment portfolio, particularly as continued sustained inflation and uncertain central bank monetary responses may drive macro and individual counterparty weakness.

The independent Risk function, led by the CRO, has responsibility for ensuring an appropriate framework is in place for assessing and monitoring credit risk. All credit exposures are actively monitored by the Risk function, including the use of regular sector and position reviews and a number of early warning indicators, resulting in regular reporting to the Investment team and key governance bodies such as the Board Risk Committee.

Risk mitigants

Rothesay manages our investments in-house which allows us to proactively manage the composition of our investment portfolio. We are able to diversify exposures across and within sectors, controlling position sizes through limits, and regular monitoring and oversight of investments. For more liquid investments, we are able to actively reduce exposure where we have credit or other concerns.

When making new investments, Rothesay considers the potential exposure to climate change risk and other sustainability factors. Where such risks are likely to be financially material over the life of the transaction then this will be considered during the internal credit rating assessment. Such considerations can also lead to investment in shorter duration assets and avoidance of risk exposure, for example when Rothesay funds the origination of residential mortgages, our lending criteria includes a specification of the type of properties that are acceptable including factors such as construction, location and environmental perils such as flood risk.

C. Risk profile *continued*

To mitigate the credit exposures on derivatives and collateralised agreement transactions, Rothesay obtains collateral from counterparties on an upfront or contingent basis. Rothesay also enters into netting agreements with counterparties that permit it to offset receivables and payables with such counterparties for transaction settlements and upon a counterparty default.

When Rothesay does not have sufficient visibility into a counterparty's financial strength, or when it believes a counterparty requires support from its parent company, Rothesay may obtain third-party guarantees of the counterparty's obligations. Rothesay also mitigates its investment and counterparty credit risk using credit derivatives.

Credit exposures

Rothesay is exposed to credit risk from its receivables from third parties. Receivables from counterparties are generally comprised of collateralised receivables related to derivatives or collateralised agreements and have minimal credit risk due to the value of the collateral received. In addition, Rothesay invests in assets that are typically highly rated, or assets where there is underlying structural security in the event of a default. These assets include supranationals, sovereign bonds, sub-sovereign bonds, covered bonds, higher education bonds, infrastructure assets, unsecured corporate bonds and secured residential lending.

Further information is provided below:

Cash and cash equivalents

Cash and cash equivalents include both interest bearing and non-interest bearing deposits. To mitigate the risk of credit loss, Rothesay diversifies its exposure and places its deposits with multiple banks.

Collateralised agreements

Collateralised agreements are reported at fair value or contractual value before consideration of collateral received on the balance sheet. Rothesay bears credit risk related to sale and repurchase agreements and securities borrowing only to the extent that cash advanced to the counterparty exceeds the value of the collateral received or charges over assets. Therefore, Rothesay's credit exposure on the transactions is significantly lower than the amounts recorded on the balance sheet. Rothesay also has credit exposure on repurchase agreements and securities loaned, which are liabilities on its consolidated statement of financial position, to the extent that the collateral pledged for these transactions exceeds the amount of cash received.

Note F.2.1 Credit Risk in the Group's Annual Report and Accounts shows the impact of the netting arrangements resulting in the derivative assets and liabilities presented net in the balance sheet, including balances which do not qualify for netting under IAS 32.

Other than a small number of residential mortgages, as of the current and prior year end there were no financial assets past due.

Note that capital for the credit risk associated with bonds, loans and securitisations is included in the market risk sub-module under Solvency II (see Section C.2).

As at 31 December 2025, the required capital for counterparty default risk pre-diversification is £436m (2024: £417m). Please refer to QRT IR.25.04 and Section E.4. Information on risk exposures and concentration on an IFRS basis are included in note F of the Annual Report and Accounts.

C. Risk profile **continued**

C.4 Liquidity risk

Liquidity risk arises where timing differences and/or uncertainties occur between cash inflows and cash outflows. The objective of liquidity management is to ensure that Rothesay is capable of honouring all cash flow commitments on both an ongoing basis and in highly stressed scenarios, without incurring significant cost or business disruption.

Rothesay's liquidity policy is designed to ensure the availability of sufficient funds to meet cash flow requirements on a timely basis via:

- Maintenance of substantial excess liquidity. Rothesay seeks to enter into long-term illiquid investments that match its liabilities in order to maximise the value of the illiquidity premium. To mitigate residual liquidity risk, Rothesay maintains substantial excess liquidity to meet a broad range of potential cash outflows in a stressed environment including collateral outflows and financing obligations.
- Entering into repurchase agreements and derivative and reinsurance agreements that allow Rothesay to post corporate bonds as collateral rather than just cash and gilts.
- Conservative asset/liability management. Rothesay seeks to maintain funding sources that are sufficiently long-term in order to withstand a prolonged or severe liquidity-stressed environment. Only the most liquid assets held on Rothesay's balance sheet are assumed to be available to meet potential stressed liquidity requirements.
- Maintenance of a comprehensive liquidity contingency plan including having contingent liquidity facilities executed which can be drawn if required to raise cash.

The liquidity management framework is designed to ensure that a prudent level of liquidity is maintained on a spot basis, but also under stressed market conditions, at which time liquidity may leave Rothesay through collateral outflows and ongoing business obligations such as expenses and undrawn investments. A comprehensive analysis of all sources of liquidity risk to which the Group is exposed is maintained. Based upon this analysis, an extensive suite of stresses is considered as part of the liquidity management framework, including onerous market shocks, against the limits applied by the Board.

Management is responsible and accountable for managing liquidity risks within prescribed limits that are set by the Board and are overseen by the Board Risk Committee. The second line Risk function ensures that an appropriate framework is in place for assessing, monitoring and managing liquidity risk. Liquidity is managed for Rothesay as a whole, in addition to at a Solvency II fund level. Risks are monitored and controlled through strong oversight, and independent control and support functions across the business.

No capital is held to meet liquidity risk as capital is not an appropriate mitigant for liquidity risk and we hold significant buffers of liquid assets under our liquidity framework as well as contingent liquidity facilities as our key mitigants. Please refer to QRT IR.23. Information on risk exposures and concentration on an IFRS basis is included in note F of the Annual Report and Accounts.

C. Risk profile **continued**

C.5 Operational risk

Operational risk encompasses a wide range of non-financial risks which arise from inadequate or failed processes, personnel, or systems, or from external events. For example, operational risk includes conduct risk, model risk, vendor risk, project risk and cyber risk. Operational risk events can cause financial losses, reputational damage, adverse regulatory action, or customer detriment (or a combination of these).

Rothesay manages operational risk through the development and maintenance of an effective Risk Management Framework which ensures that a comprehensive internal control environment is in place. This is supported by regular risk and control self-assessments coordinated, challenged and reported by the second line, which allow risk levels to be measured and control enhancements to be developed in line with Rothesay's risk appetite.

Rothesay also uses scenario analysis and testing to explore key areas of operational risk, ensuring that the implications of adverse operational risk events crystallising are well understood and that, where appropriate, additional controls are introduced to further mitigate risk.

In accordance to Rothesay's Operational Resilience Framework, the Operational Resilience team monitors and stress tests the Group's ability to continue to deliver important services to its policyholders and other key stakeholders in the event of severe operational disruption. The framework covers internal resources (e.g. systems, teams, data, etc.) and those of the Group's third parties that support delivery of these services. Rothesay's business continuity management system which supports our operational resilience is ISO 22301 accredited.

Rothesay utilises third parties for the provision of certain systems or services to or on behalf of the Group, several of which are classified as material outsourcing/third party arrangements. All third parties are subject to initial due diligence prior to onboarding, and then ongoing review, assurance, and oversight thereafter which is commensurate with the criticality and risk associated with each third party. The Customer Conduct Committee and Executive Customer Committee provide dedicated oversight of Rothesay's customer facing third parties.

Strategic projects are monitored by Rothesay's Change Management function and relevant committees and are required to operate according to our project management framework.

Rothesay insures the pensions of approximately one million individual policyholders and is therefore exposed to potential conduct risk in relation to these policies. Whilst Rothesay is also exposed to reputational risk, we take great care to protect our reputation and always strive to do the right thing. Conduct risk is managed by the Compliance function and, with respect to customer conduct, overseen by the Customer Conduct Committee.

Rothesay employs financial models in our day-to-day activities to inform and manage the business. Material errors in these models could expose Rothesay to losses and/or reputational damage. Model risk is managed via a model control framework that identifies, validates and monitors models that are material to Rothesay. To support this framework, Rothesay has a dedicated second line Model Risk Management team within the Risk function.

Rothesay seeks to mitigate cyber risk through robust processes and controls including threat intelligence, data protection measures, penetration testing, incident response plans, and employee training. Recognising the importance of information security, Rothesay maintains ISO 27001 accreditation.

Rothesay seeks to mitigate taxation and financial reporting risk by focusing on compliance with relevant tax laws and financial reporting regulations. Rothesay will not undertake tax planning that is contrived or artificial and Rothesay seeks to have an open, fair and proactive relationship with tax authorities at all times.

As at 31 December 2025, the required capital for operational risk based on the internal model is £703m (2024: £677m). Please refer to QRT IR.25.04.

C. Risk profile **continued**

C.6 Other material risks

C.6.1 Climate change risk

Rothesay's assets are exposed to the potential impact of climate change. Such risks include:

- Physical risks such as increasing frequency and severity of flooding;
- Transition risks which can arise from the process of adjustment towards a low-carbon economy; and
- Litigation risks such as people or businesses seeking compensation for losses from physical or transition risks.

Rothesay intends to transition its investment portfolio to Net Zero GHG emissions by 2050. As a significant investor in the UK and other developed economies, we believe that an important element of managing climate risk in our portfolio is building a strong understanding of the climate change management of our counterparties, such as evidence of tangible climate-related targets and published net Zero Transition Plans. We are also committed to providing increasingly clear and complete reporting on the climate change risks within our portfolio, to provide transparency for our investors and policyholders.

In line with this, we include disclosures consistent with the Task Force on Climate-related Financial Disclosures (TCFD) guidance in our Annual Report. We published our annual Climate Report in June 2025, which sets out, amongst other things, how we manage climate risk, Rothesay's direct carbon emissions, and the carbon intensity of our investment portfolio. In addition we published our first Net Zero Transition Plan in 2025, which outlines the progress we have made so far against this commitment alongside potential future actions and challenges.

Climate-related risks are incorporated into Rothesay's Risk Management Framework. The in-house investment and pricing teams assess climate-related risk (physical and transitional) as part of the transaction approval process and this assessment is reviewed and challenged by the second line Risk function.

We have assessed our investment portfolio to identify the sectors and asset types with the greatest exposure to climate risk, and conduct counterparty-level reviews for the highest priority sectors. These reviews are used to feed into our investment decisions, counterparty engagement and risk limit calibration. In addition, for our property-backed assets we have conducted studies focusing on assessing vulnerability to specific climate change linked natural disasters, for example flood risk for our UK, French and Dutch mortgage portfolios.

Rothesay continues to develop its own climate change stress testing capabilities, to explore, understand and model how both physical risks and the transition to a low carbon economy could affect the ratings and value of our asset portfolio over time.

C.6.2 Other risks

Rothesay is exposed to the risk that a change in the regulatory, legal or political environment may have adverse consequences on Rothesay's business model, operations and financial performance. Rothesay is subject to UK regulation, and in particular Rothesay is required to comply with capital adequacy requirements.

Rothesay continues to actively monitor the political landscape. Where appropriate, Rothesay engages with Government or responds to consultations to ensure our interests are protected for the benefit of our stakeholders. Strategic decisions and individual asset underwrites take into account the overall political landscape.

Rothesay seeks to have a regular dialogue with regulators in order to ensure compliance, as well as the ability to react quickly to any unanticipated developments. Rothesay seeks to have an open and transparent relationship with regulators at all times.

C. Risk profile **continued**

C.7 Any other information

C.7.1 Solvency II sensitivities

The table below provides a range of sensitivities as at 31 December 2025 and comparatives as at 31 December 2024. Where applicable, allowance has been made for the impact of recalculating transitional solvency relief. To better reflect the long-term position, sensitivities have been calculated against available Own Funds rather than eligible Own Funds. The sensitivities show that Rothesay can withstand a wide range of stresses and that Rothesay is particularly sensitive to movements in interest rates. In order to mitigate this impact, Rothesay has implemented a dynamic capital management framework which seeks to protect both the solvency position and IFRS position of the business. In the results below, interest rates and inflation are assumed to fall progressively and hedging is adjusted accordingly:

2025	Change in assumptions	Impact on available Own Funds £m	Impact on SCR £m	Impact on RL coverage ratio %
Annuitant mortality	+5% qx	164	(69)	9%
Annuitant mortality	-5% qx	(172)	77	(10%)
Interest rate	+100bps	(261)	(397)	22%
Interest rate	-100bps	277	501	(23%)
Inflation	+100bps	(8)	128	(9%)
Inflation	-100bps	56	(64)	6%
Credit spread widening	+100bps	(229)	(201)	8%
Property prices	-10%	(86)	66	(7%)
Expenses	+10%	(79)	31	(4%)

2024	Change in assumptions	Impact on Available Own Funds £m	Impact on SCR £m	Impact on RL coverage ratio %
Annuitant mortality	+5% qx	170	(70)	11%
Annuitant mortality	-5% qx	(179)	90	(13%)
Interest rate	+100bps	(348)	(292)	16%
Interest rate	-100bps	342	443	(24%)
Inflation	+100bps	86	191	(13%)
Inflation	-100bps	(3)	(73)	6%
Credit spread widening	+100bps	(133)	(146)	9%
Property Prices	-10%	(68)	66	(8%)
Expenses	+10%	(78)	38	(6%)

The sensitivities shown capture non-linearity effects, which may be significant following large market movements.

D. Valuation for solvency purposes

The significant classes of assets shown on Rothesay's Solvency II balance sheet, the Solvency II values and values for the corresponding assets shown in Rothesay's financial statements are summarised in the table below. The numbering of the line items refers to the sections below. The presentation of the tables below has been revised in order to improve clarity and to facilitate a clearer comparison between IFRS and Solvency II. Please note there may be rounding differences between the QRTs and the numbers below.

RL – Reconciliation IFRS balance sheet to SII balance sheet 2025	IFRS £m	Presentational and reclassification adjustments £m	Valuation differences £m	Consolidation adjustments £m	Solvency II £m
Collective investment schemes	4,601	15	—	—	4,616

The material classes of assets shown on RLP's Solvency II balance sheet, the Solvency II values and values for the corresponding assets shown in RLP's financial statements are summarised in the table below. The numbering of the line items refers to the sections below. The presentation of the tables below has been revised in order to improve clarity and to facilitate a clearer comparison between IFRS and Solvency II. Please note there may be rounding differences between the QRTs and the numbers below.

D. Valuation for solvency purposes **continued**

D.1 Valuation of assets and financial liabilities

Please refer to QRT IR.02.01. Except where otherwise noted, the narrative below applies to both RLP and RL. There are no measurement differences in relation to assets and financial liabilities between IFRS and Solvency II, except for property, plant and equipment, reinsurance balances, receivables, borrowings and deferred tax. There are presentational differences, for example under Solvency II financial assets are presented including accrued interest but under IFRS accrued interest is disclosed in accrued interest and prepayments.

Details of our IFRS accounting policies can be found in the notes to the Annual Report and Accounts.

Consolidation Approach

The Solvency II balance sheet has been prepared using the default accounting consolidation method ('method 1'), which differs to the consolidation method applied under IFRS. The main difference is that under Solvency II, only the insurance related undertakings, insurance holding companies and ancillary services undertakings are fully consolidated. All other subsidiaries are included under "Holdings in related undertakings" measured using adjusted equity method.

D.1.1 Financial investments and financial liabilities

Valuation of financial investments is based on fair value consistent with Rothesay's accounting policies. The fair value of a financial instrument is the amount that would be received on sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, i.e. the exit price. Fair value measurements do not include transaction costs.

As noted during prior years, a number of portfolios of lifetime mortgages have been transferred from RLP to LTMF and a series of notes issued to RLP. During 2025, a further £0.6bn of loans were transferred from RLP to LTMF. During 2018, loans secured on ground rents were transferred to RMA1 and notes issued to RLP. No further transfers have since been made. During prior years, a number of portfolios of Dutch mortgage loans were transferred from RLP to RMA3 and a series of notes issued.

Under IFRS, the notes do not appear on the balance sheet of either RL or RLP. This is also the case for RL under Solvency II. However, under Solvency II, the notes are shown on the RLP balance sheet. The notes issued by LTMF are included in mortgages and the notes issued by RMA1 and RMA3 are considered to be loans secured on property. As a result, the restructuring of RMA1 has no impact on the breakdown of financial investments. However, the value of the notes issued by LTMF and RMA3 includes cash balances which under IFRS are included in receivables. These balances at year end 2025 are £239m and £134m respectively (2024: £232m and £74m) so for RLP this has resulted in a reduction in receivables and a corresponding increase in the value of mortgages and loans secured on property.

For the purposes of the reconciliation between IFRS and Solvency II, the adjustment to loans secured on property includes corporate loans with market value of £1,558m (2024: £1,142m), which has been reclassified from corporate bonds and other corporate debt to align with Solvency II classifications.

There is no difference in the fair value of our financial liabilities between the IFRS valuation and the Solvency II valuation. There is presentational difference of accrued interest payable as explained above.

D.1.2 Investment in subsidiaries

Investments in subsidiaries under IFRS are valued at cost less provision for impairment and under Solvency II are valued at the underlying value of the assets and liabilities.

D. Valuation for solvency purposes **continued**

D.1.3 Property, plant and equipment

The IFRS valuation of Rothesay's property, plant and equipment is stated at cost less accumulated depreciation and accumulated impairment losses. Under Solvency II, property, plant and equipment should be valued on a basis that reflects their fair value. We have taken the prudent approach of valuing property, plant and equipment at nil on a Solvency II basis and therefore treating the IFRS valuation as inadmissible.

D.1.4 Accrued interest, prepayments and receivables

Accrued interest and prepayments are carried at amortised cost for IFRS purposes. Rothesay considers there are no material differences between an amortised cost and mark-to-market valuation for these receivables.

There are, however, presentational differences due to accrued interest being included within financial investments on a Solvency II basis and excluded on an IFRS basis (except in relation to lifetime mortgages). Other presentational differences are predominantly due to the treatment of deferred premiums; under IFRS 17 these are netted down in insurance contract liabilities, whereas Solvency II includes deferred premium as a receivable asset.

D.1.5 Cash and cash equivalents

Cash and cash equivalents are recognised as assets at their fair value in the IFRS financial statements. This is generally their full nominal value and the amount due on repayment for redemption. Therefore, there are no differences on an IFRS and Solvency II basis.

D.1.6 Goodwill and intangible assets

Rothesay has no goodwill assets or any intangible assets on our Solvency II balance sheet.

D.1.7 Property

Properties (other than for own use) include long-dated commercial property leases. These include properties classified as finance lease as the terms of the lease transfers substantially all of the risk and rewards incidental to the ownership of the underlying asset to the lessee. Under IFRS, these assets are valued at amortised cost, while under Solvency II these assets are valued using a discounted cash flows model and the valuation and capitalisation rates informed by similar transactions and market indications. Properties (other than for own use) also include property under operating leases, which is measured at fair value under IFRS and Solvency II.

D.1.8 Holdings in related undertakings

Subsidiaries that are classified as unconsolidated related undertakings for which quoted market prices are not available have applied the adjusted equity valuation method. The adjusted equity method requires participations to be valued based on the Group's share of the excess of assets over liabilities of the related undertaking, determined in accordance with Solvency UK valuation principles. The Group's holdings in related undertakings include FCT Chagall & Morisot which invest in home loans, RPC1 which holds the ground rent of The O2 in London, and Riverton, a direct lender within the Group.

D. Valuation for solvency purposes continued

D.2 Technical provisions

Please refer to QRT IR.12.01.

Technical provisions are the sum of a best estimate of liabilities allowing for reinsurance inwards and a risk margin. As part of the transitional arrangements in relation to the introduction of Solvency II, Rothesay is permitted to take credit for transitional solvency relief which acts as a deduction from the technical provisions. The table below shows the technical provisions of Rothesay. The transitional solvency relief shown for 31 December 2025 allows for the impact of recalculation on that date and for amortisation of 9/16ths of the allowance (2024: 8/16ths of the allowance):

	2025 £m	2024 £m
Gross best estimate liabilities	60,541	57,836
Risk margin (unaudited)	488	543
Transitional solvency relief (gross of tax impact) (unaudited)	(135)	(177)
Insurance contract liabilities	60,894	58,202
Reinsurance liabilities	2,947	2,982
Net technical provisions	63,841	61,184

Net technical provisions increased from £61.2bn as at 31 December 2024 to £63.8bn as at 31 December 2025 largely as a result of the execution of £5.2bn of new business offset by the impact of movements in interest and inflation rates in conjunction with the expected run-off-of the liabilities.

D.2.1 Best estimate and reinsurance liabilities

Best estimate liabilities (BEL) are calculated by discounting the projected cash flows based on our best estimate assumptions with regard to future demographic experience. Cash flows include benefits and claims, future contractual premiums and expenses. The BEL is calculated gross of reinsurance, although the cash flow projections include reinsurance-related cash flows in order to allow the reinsurance liabilities to be separately calculated.

Reinsurance liabilities are shown as negative assets under Solvency II. The value of reinsurance is negative because, under best estimate assumptions, Rothesay expects to pay reinsurance fees to the reinsurers. However, the solvency position of Rothesay benefits from reinsurance as the use of reinsurance leads to reductions in the SCR and in the risk margin.

No allowance for future management action is made in the valuation of technical provisions.

D. Valuation for solvency purposes continued

Mortality assumptions

Mortality bases have been determined separately for each insurance contract. The resulting assumptions are equivalent to using the base mortality and improvement assumptions set out in the table below:

	2025		2024	
	Pensions originated	Insurance originated	Pensions originated	Insurance originated
Males	107.8% S3PMA	104.6% S3PMA	106.1% S3PMA	103.4% S3PMA
Females	107.8% S3PFA	104.6% S3PFA	106.1% S3PFA	103.4% S3PFA

The change over 2025 reflected the inclusion of new business and differences from expected mortality in recent years. For pension scheme originated business, ultimate mortality has been used in all cases. For insurance originated business, the stated base mortality basis incorporates the effect of selection adjustments for relevant policies.

Recent mortality experience is analysed annually for each pension scheme and for insurance originated business. The last review was carried out during 2025. The best estimate base mortality assumptions used in the valuation are based on this actual mortality experience. Mortality experience has been compared to expected levels with allowance for population level experience, hence heavy experience due to the COVID-19 pandemic has not been projected indefinitely. Mortality assumptions are generally set with reference to a Rothesay-specific suite of mortality tables. For the purpose of our reporting disclosures, these have been expressed as a single adjustment equivalent to the CMI S3 series of mortality tables drawn up by the Continuous Mortality Investigation (CMI) of the Institute and Faculty of Actuaries. The S3 tables are based on industry-wide experience. For the S3 tables, past mortality improvements are applied assuming the base mortality rates are as at 2013.

Mortality improvements used to roll base tables forward to the current date use an advanced calibration of the CMI 2024 model with limited period smoothing and including 2020 to 2024 experience to represent realised population mortality improvements. This is allowed for in the base table and mortality improvement equivalents shown in the preceding/proceeding tables.

	Future mortality improvements	
	2025	2024
Males	CMI_2024*_M[1.5%; Sk=7.0; A=0.4%]	CMI_2023*_M[1.8%; Sk=7.6]
Females	CMI_2024*_F[1.5%; Sk=7.0; A=0.4%]	CMI_2023*_F[1.8%; Sk=7.6]

* Calibration ages 20-90.

Allowance is made for future improvements in annuitant mortality with reference to statistical analysis of historical rates of mortality improvements, expert judgement of future changes in mortality improvements, industry benchmarking and reinsurance pricing. During 2025, mortality improvement assumptions were updated to reflect recent mortality improvements, including adoption of the CMI 2024 improvement model. The CMI 2024 model introduces various changes compared to previous versions, including a fitted overlay to capture the transient nature of the pandemic experience. For both 2024 and 2025, an advanced calibration of the model has been used.

The chosen long-term improvement rate assumption varies by age using a bespoke calibration that tapers non-linearly from age 70 to 0% at age 120. The long-term rates in the table below are expressed as core CMI model long-term rates and are equivalent on a present value basis to the actual long-term rate adopted. Following a review of short and longer term drivers, the assumed initial rate of improvement has been increased and the bespoke calibration of the best estimate long-term improvement rates have been reduced. The initial adjustment parameter ("A" parameter) has been adopted from YE25 to adjust the initial rate of mortality improvements to allow for socio-economic effects as well as further adjustments to set the desired initial rate of mortality improvements. For YE24 the "A" parameter was not adopted with adjustment to the initial rate of mortality improvements to allow for socioeconomic effects being made through the Sk parameter.

D. Valuation for solvency purposes **continued**

Discount rate

The discount rate used for the purpose of calculating the technical provisions is the Solvency II basic risk-free term structure.

Firms with liabilities such as annuity business can discount these liabilities using the risk-free rate plus the Matching Adjustment (if approved by the PRA). The Matching Adjustment is broadly equivalent to the illiquidity premium that can be earned on the assets held to back liabilities. Rothesay applies the Matching Adjustment in calculating the BEL for most of our single premium insurance business. Liabilities not covered by the Matching Adjustment include regular premium longevity swap business and single premium annuities with guarantees or deferred premiums that prevent Matching Adjustment eligibility. Ceded reinsurance liabilities are also discounted using the basic risk-free rate with no adjustment.

The assets held in the Matching Adjustment Portfolio have fixed cash flows and predominantly consist of assets included in Bonds (Government and Corporate Bonds) and Loans and Mortgages categories in QRT IR.02.01.

As at 31 December 2025, the Matching Adjustment was approximately equal to 102 basis points (2024: 108bps). The decrease in Matching Adjustment has mainly arisen from the changes in market conditions, along with changes in the mix of assets used to back the liabilities in the Matching Adjustment Portfolio. Use of the Matching Adjustment had the impact of reducing the best estimate liabilities for the business in the Matching Adjustment Portfolio by around 11% (2024: 12%).

Losing Matching Adjustment approval is a very remote risk for the business, as we have appropriate controls in place to ensure ongoing Matching Adjustment compliance and have regular dialogue with the PRA about our approach to matching. However, insurers using the Matching Adjustment are required to disclose the impact on the balance sheet of not applying the Matching Adjustment. Without the Matching Adjustment, the BEL would increase by £6.8bn (2024: £7.5bn), although this would be partially offset by an increase in transitional solvency relief leaving eligible Own Funds £4.8bn lower (unaudited) as at 31 December 2025 (2024: £4.6bn lower (unaudited)).

The fundamental spread of a bond represents the portion of the return in excess of the risk-free rate which is attributed to the expected default risk and expected loss as a result of downgrades. Fundamental spreads are issued by the PRA, and provided by currency and term for government bonds and corporate bonds, where the latter is further split by whole letter credit rating and sector (financial and non-financial institutions). Fundamental spreads are applied to notched credit ratings for the calculation of the MA.

In addition, with consideration of the requirements of the PRA rulebook and SS7/18 relating to MA attestation, the Matching Adjustment spread quoted above reflects add-ons made to fundamental spreads for some assets to reflect risks retained by Rothesay that we deem may not fully be reflected in the fundamental spreads for those assets.

Some liabilities which are not discounted using the risk-free rate plus Matching Adjustment can be discounted using the risk-free rate plus a Volatility Adjustment (if approved by the PRA). The size of this Volatility Adjustment is published by the PRA each month and was 24bps at 31 December 2025 (2024: 24bps) for GBP denominated liabilities. This reduced the BEL by £0.1bn (2024: £0.1bn).

See IR.22.01 for changes in the SCR, MCR and eligible own funds associated with scenarios where there are no long-term guarantees measures (including the removal of the Matching Adjustment).

D. Valuation for solvency purposes *continued*

Expenses

Cash flows include an allowance for all expenses associated with managing existing insurance obligations, namely:

- the cost of maintenance associated with existing insurance obligations; and
- the cost of administration associated with existing insurance obligations.

The allowance made for future expenses was updated at the end of 2025 following the regular review of allowances compared to total costs incurred by Rothesay during 2024 and projected 2025 expenses.

The insurance contract liabilities future cash flows include the projected expenses payable covering administration agreements, long-term business overhead expenses and investment management expenses. For disclosure purposes these have been expressed as an amount per policy. The average per policy allowance is £72 per policy per annum (2024: £68 per policy per annum). In addition allowances are made for short-term project costs. The investment management expenses are applied as an adjustment to the discount rate.

Within these expense provisions, an allowance for future expense inflation has been made to cover the impact of both salary and price inflation. Where applicable, the future rate of expense inflation is assumed to be RPI (as implied by the RPI swap curve) for maintenance expenses, with an additional 0.25% p.a. on some expenses (2024: 0.25% p.a. on some expenses).

Other assumptions

An important actuarial assumption relates to the future rate of escalation of certain annuity benefits. Where possible, such rates are derived from inflation swap markets. Whilst that is still the case for more liquid inflation rates, there is not a sufficiently deep, liquid market to support setting the rate of limited price indexation (LPI). We have therefore projected these rates using LPI models based on realised LPI and other market inputs. During the year, we have performed the annual review of the LPI model using updated market assumptions and data.

A number of other, less financially significant, assumptions are made in determining the provisions. These assumptions include, inter alia, the proportion of deferred and immediate annuitants assumed to have a dependant eligible for contingent benefits, the dependant's age difference, the proportion of deferred annuitants opting to take a proportion or all of their benefit at retirement as a lump sum and the provision required to cover data risk.

The modelling of member options allows for the probability that deferred annuitants choose to transfer their benefits each year. The cash flow profile resulting from the assumed take-up of member options impacts the composition of the asset portfolio used to derive the valuation rate of interest.

When deferred annuitants have passed the scheme normal retirement date and have been subject to an in-depth tracing exercise and yet remain untraced, a prudent allowance has been made for the probability of them taking their benefits in the future. All other individuals who have passed the scheme normal retirement date are assumed to start receiving pension payments immediately.

As part of pension de-risking Rothesay sometimes provides insurance against residual data risk. Examples of such risks include the risk that there are beneficiaries of a pension scheme missing from the data, the risk that a policyholder's data is inaccurate or the risk that scheme rules have been inaccurately interpreted. After detailed due diligence, appropriate provisions are established.

D.2.2 Risk margin

This section is not subject to audit.

The risk margin is the cost of transferring non-hedgeable risks. For Rothesay, this includes all underwriting risks, counterparty default risk in relation to reinsurance and operational risk. The SCR for all risk modules are calculated using the FIM. Rothesay adopts a mix of approaches to project the non-hedgeable SCR. For more material risks, the projected run-off is a combination of the SCR calculated accurately at some future points in time with approximations for the remaining periods. For less material risks, the SCRs are projected using a suitable driver.

D. Valuation for solvency purposes **continued**

D.2.3 Transitional solvency relief

This section is not subject to audit.

Rothesay is permitted to take credit for transitional solvency relief in relation to business written before 1 January 2016. Transitional solvency relief amortises linearly to zero, falling by 1/16th on 1 January 2017 and again each year thereafter. We recalculated the transitional relief on 31 December 2025.

Updated in November 2024, the supervisory statement Solvency II: Transitional measures on risk-free interest rates and technical provisions, SS17/15, details a simplified mechanism for UK insurers to calculate their transitional measures on technical provisions (TMTP), which amongst other proposals, removes the requirement to continually apply to recalculate the TMTP. As a result, Rothesay recalculates the transitional relief every reporting period.

Rothesay was granted permission to continue to use the "legacy approach" for the calculation of transitional solvency relief.

As at 31 December 2025, transitional solvency relief was £135m gross of the impact of tax after allowing for amortisation of 9/16ths on 1 January 2025. (2024: £177m allowing for amortisation of 8/16ths on 1 January 2024). Transitional solvency relief is calculated using transitional measures on technical provisions. Transitional measures on interest rates are not applied.

Use of transitional solvency relief increases the deferred tax liability on a Solvency II basis. This is discussed in Section D.3.3.

Insurers using transitional solvency relief are required to disclose the impact on the balance sheet of not using transitional solvency relief. In the absence of transitional solvency relief, Rothesay's Own Funds would reduce by £101m after allowing for the associated impact of tax on Own Funds (2024: £133m). There is a second order effect on the SCR from removal of transitional measures due to tax effects. Without allowance for transitional solvency relief, Rothesay coverage would be 241% (2024: 255%) and RLP's coverage would be 244% (2024: 258%).

D.2.4 Uncertainty associated with the value of technical provisions

Uncertainty relates primarily to the way in which actual performance differs from the best estimate assumptions used to calculate the technical provisions. Differences will arise as a result of Rothesay's risk profile, as described in Section C (which is not subject to audit), namely:

- Insurance risk covering demographic assumptions, including assumptions in relation to base mortality, mortality improvements, dependants and the exercise of options by deferred annuitants;
- Market risk (predominantly interest rates and inflation); and
- Credit risk.

Section C.7 provides sensitivities of the surplus to changes in these areas. It should be noted that for market risks the sensitivities reflect changes to both the technical provisions and the assets.

D. Valuation for solvency purposes continued

D.2.5 Comparison of Solvency II technical provisions and IFRS liabilities

The main differences between the Solvency II technical provisions and IFRS 17 liabilities arise due to the presence of the CSM and RA within the IFRS 17 liabilities compared to the inclusion of the risk margin (net of transitional measures) under Solvency II and the differences in discount rates.

A reconciliation between Solvency II technical provisions and IFRS liabilities is shown in the chart below.

Reconciliation from IFRS liabilities to SII technical provisions as at 31 December 2025

The differences in the discount rates arise predominantly from:

- differences between the IFRS credit default allowance and Solvency II fundamental spreads;
- differences between the assets used for the yield calculation due to calculation methodology differences; and
- impact under Solvency II of certain single premium liabilities not being held in the Matching Adjustment Portfolio.

Other presentational differences are predominantly due to the treatment of deferred premiums. Under IFRS 17 these are netted down in insurance contract liabilities, whereas Solvency II includes deferred premium as a receivable asset.

D.2.6 Simplified methods

No material simplifications have been used in the valuation of technical provisions other than as detailed for the risk margin calculation in Section D.2.2.

D. Valuation for solvency purposes **continued**

D.3 Other liabilities

Please refer to QRT IR.02.01.

D.3.1 Payables

Payables are carried at amortised cost for IFRS purposes. Rothesay considers that there are no material differences between an amortised cost and mark-to-market valuation for these payables and therefore there are no differences between the IFRS and Solvency II valuation except for presentational differences.

D.3.2 Borrowings

Under IFRS, borrowings (other than GBP RT1 debt as described below) are held at amortised cost, whereas under Solvency II the value of borrowings is updated to take account of changes in the relevant risk-free interest rate curve and market-based spread. As at 31 December 2025 this leads to valuation under Solvency II which is lower by £66m for all borrowings accounted for as debt under IFRS (2024: lower by £127m).

During October 2025, Rothesay Life Plc (RLP) repaid £250m of Tier 2 borrowings. During December 2025, RLP issued \$500m Restricted Tier 1 (RT1) debt in the US dollar market. The notes are perpetual with the first call date being 3 June 2035. A fixed coupon of 7% is payable annually in arrears.

Under IFRS, the value of borrowings include £11m (2024: £10m) of finance costs which are netted against the IFRS valuation of the debt. These finance costs are inadmissible for Solvency II purposes.

Note that accrued interest of £45m (2024: £44m) is included in payables rather than in the value of borrowings.

RT1 notes

Under IFRS, the £800m (2024: £800m) of GBP denominated RT1 notes valued under IFRS at £793m, (2024: £793m) are accounted for as equity and hence do not appear in borrowings. Under Solvency II these notes are included in borrowings and are valued at £712m (2024: £689m).

The \$900m of USD notes contain a contingent settlement provision which is linked to the occurrence of a 'Capital Disqualification Event'. Such an event is deemed to have taken place where, as a result of a change to the Solvency II regulations, the notes no longer qualify as Own Funds. On the occurrence of such an event and where RLP has chosen not to use its corresponding right to redeem the notes, RLP is no longer able to exercise its discretion to cancel any interest payments due. Accordingly, the notes are considered to meet the definition of a financial liability for IFRS reporting purposes, i.e. they are not accounted for as equity and are included in borrowings.

EMTN Programme

In 2022, we established a £3bn Euro Medium Term Note Programme under which RLP can issue Tier 2 debt, which was renewed in 2025.

D.3.3 Deferred tax

All temporary differences relate to UK Corporation tax and have been recognised at a rate of 25% (which is the currently enacted tax rate). The deferred tax asset under IFRS primarily represents the loss on adoption of IFRS 17 (which for tax purposes is spread over ten years, running from 2023 until 2032).

As discussed in Section D.2.3, the Solvency II technical provisions are lower than the IFRS liabilities used to calculate our tax position. As a result, there is an additional deferred tax liability on a Solvency II basis being the difference between IFRS liabilities and Solvency II technical provisions (after transitional measures) multiplied by the applicable tax rate.

Aside from these adjustments, no further adjustment is made to the tax position from that presented in Rothesay's IFRS accounts.

D. Valuation for solvency purposes **continued**

D.3.4 Accruals

Accruals are carried at amortised cost for IFRS purposes. Rothesay considers that there are no material differences between an amortised cost and mark-to-market valuation for these balances and therefore there are no differences between the IFRS and Solvency II valuation but accrued interest on financial liabilities under Solvency II is disclosed with the liability.

D.3.5 Leasehold liabilities and right-of-use asset

IFRS 16 requires lessees to recognise a lease liability reflecting future lease payments and a "right-of-use asset" for virtually all lease contracts. There is no difference between the Solvency II valuation and the IFRS valuation.

D.3.6 Contingent liabilities

The IFRS valuation (prescribed by IAS 37) defines a contingent liability as:

- a) a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity; or
- b) a present obligation that arises from past events but is not recognised because: (i) it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation; or (ii) the amount of the obligation cannot be measured with sufficient reliability.

A contingent liability will be disclosed under IFRS but will not be recognised unless there is a greater than 50% probability of it materialising. The Solvency II regulations state that contingent liabilities should be recognised if considered "material".

Rothesay does not consider that it has any contingent liabilities.

D.4 Alternative methods for valuation

Rothesay uses alternative methods of valuation for Level 3 assets where one or more inputs to valuation techniques are significant and unobservable. Level 3 assets include:

- **Corporate bonds and other corporate debt** – These mainly comprise of private secured notes which are valued using discounted future cash flow models using spreads derived from observable spreads from similar assets in terms of credit quality and duration and applying additional illiquidity adjustments informed by recent transactions and indicative market quotes.
- **Derivative assets** – Rothesay uses derivative contracts for the purposes of efficient portfolio management and to mitigate the risk of adverse market movements. Rothesay's derivative contracts consist primarily of OTC derivatives. Such derivatives are not quoted in an active market and are generally valued using market transactions and other market evidence, including market-based inputs to models, calibration to market clearing transactions, broker or dealer quotations or other alternative pricing sources with reasonable levels of price transparency. Consideration is given to the nature of the quotations and the relationship of recent market activity to the prices provided from alternative pricing sources.
- **Loans secured on property** – These are valued using discounted future cash flow models using spreads derived from observable spreads from similar assets in terms of credit quality, loan-to-value ratio, sector and duration and applying additional illiquidity adjustments informed by recent transactions and indicative market quotes. Where possible, underlying property valuations are based on recent independent valuations and other market data.

D. Valuation for solvency purposes **continued**

- **Lifetime mortgages** – Lifetime mortgages are valued using a discounted cash flow model by projecting future net cash flows on a closed form basis allowing for demographic assumptions, consistent with those used for insurance contracts adjusted for transfer to long-term care, prepayment rates, future expenses and potential cost of providing the no negative equity guarantee (NNEG). Cash flows are then discounted at a risk-free rate plus liquidity premium derived from market-observed levels.

The NNEG can be thought of as a series of options written by Rothesay which allow the lifetime mortgage holders to extinguish their loan by selling their property back to Rothesay at the current market value and at the point at which the mortgage must be redeemed (typically on death or transfer to long-term care), even when property values are lower than the outstanding loan balance. Underlying house prices are updated in line with the latest available market data.

- **Other residential mortgages** – Other residential mortgages are valued using a discounted cash flow model which allows for prepayment rates, borrower defaults and future house prices. Cash flows are then discounted at a risk-free rate plus liquidity premium derived from market-observed levels.
- **Collective investment schemes** – This comprises various types of fund assets which are marked using the fund valuation with fair value adjustments based on prevailing market pricing on the underlying fund assets.
- **Property** – This comprises property assets including investment property and long-dated commercial property leases classified as finance leases. The assets are valued using a discounted cash flows model and the valuation and capitalisation rates informed by similar transactions and market indications.

The valuation uncertainty of the Level 3 assets has been assessed by considering the impact of adjusting the key valuation assumptions, predominantly the discount rate, to reasonably possible alternative discount rates for the relevant asset. Further details on Rothesay's accounting policy for the valuation of Level 3 assets, including assumptions used, valuation uncertainty to material inputs, and comparison of the valuations against experience, can be found in note D.1 of the Annual Report and Accounts.

We also use alternative methods of valuation for some Level 2 assets, in particular:

- **Collateralised agreements and financing** – These trades are marked at par on day one and the valuation moves in line with market conditions thereafter. The assets are classified as Level 2 under IFRS because the valuation assumption used is deemed not significant to the valuation of the trade.

D.5 Any other information

There is no additional information on the valuation of solvency purposes to disclose.

E. Capital management

E.1 Own Funds

E.1.1 Capital management objectives

Rothesay's capital resources are of critical importance. Rothesay's capital management framework is designed to meet the following objectives:

- to maintain financial strength in adverse conditions;
- to provide customers long-term confidence in Rothesay;
- to satisfy its regulatory obligations;
- to match the profile of its assets and liabilities, taking account of the risk inherent in the business;
- to allocate capital efficiently to support new business growth;
- to retain financial flexibility by maintaining strong liquidity; and
- to provide an appropriate return to shareholders.

Rothesay operates under the Solvency II regime. This regime has been adapted for the UK market as part of an HM Treasury review – several reforms relating to the Risk Margin and Matching Adjustment had already been implemented, and the remainder of the planned reform came into effect at the end of 2024.

Rothesay aims to maintain solvency coverage in the range of 140% to 160% of the regulatory minimum solvency capital requirement (SCR). We started the year with capital surplus well above our target operating range but as we write new business the solvency coverage is expected to move closer to our target operating range.

We operate a dynamic capital management framework which reflects the sensitivity of different performance measures. Our access to real-time solvency information and balance sheet sensitivities allows us to tailor our hedging strategy to manage the trade-offs between the solvency capital position and the economic value of the business in such a way as to protect the long-term value of the business.

The ORSA considers a five-year time horizon and projections include consideration of future capital requirements.

There are no fungibility or transferability restrictions across Rothesay.

The amounts relating to risk margin, transitional relief and SCR in this section are unaudited.

E.1.2 Analysis of Own Funds

Please refer to QRT IR.23.01.

There are no material deductions from either the Own Funds of RLP or the Own Funds of RL.

The notional SCR for the Matching Adjustment Portfolio is greater than the excess of assets over liabilities in this portfolio. As such, there are no Own Funds restrictions in respect of the Matching Adjustment Portfolio.

All of RL's Own Funds have been assessed as basic Own Funds. The structure and quality of RL's Own Funds by Tier is as follows:

Tier 2 funds eligible to meet the MCR are capped at 20% of the MCR as at 31 December 2025 and 31 December 2024.

During October 2025, Rothesay Life Plc (RLP) repaid £250m of Tier 2 borrowings. During December 2025, RLP issued \$500m Restricted Tier 1 (RT1) debt in the US dollar market. The notes are perpetual with the first call date being 3 June 2035. A fixed coupon of 7% is payable annually in arrears.

E.1.2.1 Ordinary share capital and share premium

No issuance of share capital during the year.

E.1.2.2 Reconciliation reserve

The reconciliation reserves disclosed on form QRT IR.23.01 for RLP of £5.2bn (2024: £5.3bn) consist of the excess of assets over liabilities adjusted by ordinary share capital, share premium and foreseeable charges. The reconciliation reserves disclosed on form QRT IR.23.01 for Rothesay Group of £5.1bn (2024: £5.2bn) consist of the excess of assets over liabilities adjusted by ordinary share capital, share premium, own shares held and foreseeable charges.

E.1.2.3 Subordinated liabilities

Note that in the table below, the Solvency II values exclude accrued interest of £45m (2024: £44m) as this has been included within payables.

Rothesay's subordinated liabilities are summarised in the following table. In each case, RLP is the borrower.

Solvency II classification	Public/private	Coupon	Issue date	Maturity date	Call date	Issue amount (£m)	Solvency II value 2025 (£m)
Tier 2	Private	6.05%	19/09/2017	19/09/2028	19/09/2023 and quarterly thereafter	300	273
Tier 2	Public	7.00%	11/06/2024	11/09/2034	11/06/2029	256 (\$325m)	245
Restricted Tier 1	Public	6.875%	12/09/2018	Perpetual	12/09/2028 and every 5 years thereafter	350	330
Tier 2	Public	7.02%	10/06/2024	10/12/2034	10/06/2034	500	480
Tier 3	Public	3.375%	12/07/2019	12/07/2026	No call option	500 (in three issues)	491
Restricted Tier 1	Public	5.00%	13/10/2021	Perpetual	13/10/2031	450	382
Restricted Tier 1	Public	4.875%	27/10/2021	Perpetual	13/04/2027	289 (\$400m)	287
Restricted Tier 1	Public	7%	03/12/2025	Perpetual	03/06/2035	372 (\$500m)	368
Tier 2	Public	7.734%	16/05/2023	16/05/2033	16/11/2032	500	501

E. Capital management continued

E.1.3 Movement in Own Funds

The table below provides an analysis of the movement in Own Funds net of tax under Solvency II for 2025 and 2024 for Rothesay Limited. All numbers are shown net of tax and allow for the impact of Matching Adjustment and changes in transitional solvency relief (where applicable).

	RL	
	2025 £m	2024 £m
Opening Solvency II balance as at 1 January	8,525	8,466
New business (on a fully invested basis)	10	232
Performance of in-force book	552	191
Non-economic assumption changes	(32)	3
New business acquisition expenses	(71)	(147)
Operating own funds movement	459	279
Economic conditions	177	21
Borrowing costs & other expenses	(163)	(160)
Other non-operating variances	(40)	14
Non-operating own funds movement	(26)	(125)
Total own funds movement	433	154
Eligible new capital raised less dividends paid	62	(95)
Closing balance as at 31 December	9,020	8,525

E.1.4 Reconciliation of IFRS equity to Solvency II Own Funds

The following table provides a reconciliation of Own Funds to the equity capital as reported in the financial statements:

	RL		RLP	
	2025 £m	2024 £m	2025 £m	2024 £m
IFRS equity capital	4,588	4,215	4,688	4,316
Inadmissible assets	(75)	(59)	(74)	(57)
Reserving differences	2,673	2,737	2,673	2,737
Tier 1 restricted and other capital adjustments	(1,281)	(905)	(1,363)	(974)
SII excess of assets over liabilities	5,905	5,988	5,924	6,022
Tier 1 restricted, Tier 2 and Tier 3 debt	3,201	2,615	3,201	2,615
Other capital adjustments	(86)	(78)	(9)	(9)
Eligible Own Funds	9,020	8,525	9,116	8,628

Other capital adjustments shown includes own shares and foreseeable dividends as shown on IR.23.01.

E. Capital management continued

E.2 SCR and MCR

This section is not subject to audit.

E.2.1 Solvency Capital Requirement (SCR)

The consolidated SCR is calculated using the Accounting Consolidation method, as the sum of:

- The SCR on consolidated data for wholly owned insurance subsidiary of RL and all wholly owned service subsidiaries of RL; and
- Capital requirements with respect to other relevant undertakings (RPML) as defined in the Solvency II regulations.

As at 31 December 2025, the SCR for RLP and RL, which is calculated using the FIM for all risk components was £3,668m (2024: £3,262m). Please note, both RLP and RL have the same SCR. The table below provides a breakdown of the SCR by risk module for RLP (please refer to QRT IR.25.04 and IR.28.01):

	2025 £m	2024 £m
Total market risk	3,502	2,891
Total underwriting risk	1,473	1,543
Total counterparty default risk	436	417
Total operational risk	703	677
Total pre-diversification	6,114	5,528
Diversification	(1,761)	(1,807)
Capital add-on	—	—
Loss absorbing capacity of deferred taxes	(685)	(459)
Total SCR	3,668	3,262

Diversification predominantly arises between the market risk and underwriting risk modules. There is no benefit from Group diversification.

The reduction of £685m (2024: a reduction of £459m) in respect of the loss absorbing capacity of deferred taxes (LACDT) for the Group is derived as shown below.

	2025 £m	2024 £m
LACDT justified by reversion of deferred tax liabilities	(155)	(189)
LACDT justified by reference to probable future taxable economic profit	(316)	(270)
LACDT justified by carry back, current year	(214)	—
Total LACDT	(685)	(459)

The reversion of deferred tax liabilities reflects the reversal of differences between deferred tax liabilities as reported on IR.02 and those reported on an IFRS basis. Probable future taxable economic profits are calculated based on conservative new business assumptions compared to the Group business plan. No allowance is made for the release of the risk margin when considering future profits. The adjustment justified by current year carry back reflects the recovery of taxes payable based on IFRS profits. The current year profits considered for LACDT are adjusted for amortisation of the IFRS 17 transitional DTA, which resulted in no carry back available against 2024.

There have been no simplifications or undertaking specific parameters used in the calculation of the SCR results.

E. Capital management continued

E.2.2 Movement in SCR

The table below provides an analysis of the movement in SCR for 2025 and 2024 for RLP.

	2025 £m	2024 £m
Opening SCR	3,262	3,101
New business (on a fully invested basis)	298	1,142
Performance of the in-force book	93	(495)
Non-economic assumption changes	8	(11)
Acquisition expenses	24	49
Operating SCR movement	423	685
Economic conditions	187	(611)
Borrowing costs	—	—
Other non-operating variances	(204)	87
Non-operating SCR movement	(17)	(524)
Total SCR movement	406	161
Eligible new capital raised less dividends paid	—	—
Closing SCR	3,668	3,262

E.2.3 Minimum Capital Requirement

RLP's MCR as at 31 December 2025 was £1,333m (2024: £1,277m). The MCR has been calculated using the linear MCR calculation. The MCR cap and floor did not bite as at 31 December 2025 (2024: the MCR cap and floor did not bite). The Consolidated Group MCR for RL is equal to the MCR for RLP.

E.2.4 Solvency coverage ratios

The solvency position is summarised in the table below:

	RL		RLP	
	2025	2024	2025	2024
Tier 1 capital (£m)	7,186	6,894	7,282	6,997
Tier 2 eligible capital (£m)	1,499	1,631	1,499	1,631
Tier 3 eligible capital (£m)	335	—	335	—
Own Funds eligible to meet SCR (£m)	9,020	8,525	9,116	8,628
SCR (£m)	3,668	3,262	3,668	3,262
Surplus above SCR (£m)	5,352	5,263	5,448	5,366
SCR coverage (%)	246%	261%	249%	264%
MCR (£m)	1,333	1,277	1,333	1,277
Own Funds eligible to meet MCR (£m)	7,452	7,149	7,549	7,252
MCR coverage (%)	559%	560%	566%	568%

The solvency coverage ratio as at 31 December 2025 includes recalculation of transitional solvency relief.

E.3 Use of equity risk sub-module

This section is not subject to audit. The equity risk sub-module is not applicable to Rothesay.

E. Capital management **continued**

E.4 Differences between standard formula and internal model

This section is not subject to audit.

Rothesay uses a full internal model (FIM) for the calculation of the SCR, which means that Rothesay's bespoke models are used for calculation of all risks and ensure that the allocation of capital to investment is consistent with the risk inherent in the types of highly secured and collateralised investments which are core to Rothesay's investment strategy.

As well as using the FIM for calculation of the SCR, use of the FIM is integrated into the capital management of the business, and output from the FIM is used wherever consideration of the SCR has a material impact on the decision-making process, for example in:

- Business planning and strategic decision-making;
- Assessing potential new investments;
- Pricing of new business; and
- Monitoring, reporting and management of Rothesay's Solvency II position.

E.4.1 Calculation methodology

The Internal Model has been calibrated consistently with the confidence level used in the Standard Formula calibration, i.e. to a 1-in-200 year loss in basic Own Funds over a one-year horizon.

The Internal Model encompasses all risks in the Standard Formula calibration which are relevant to Rothesay. It also includes additional risks which are not included in the Standard Formula, for example interest rate volatility and inflation risk, which impact the value of assets and liabilities; inflation volatility risk, which impacts the value of inflation-linked liabilities; and other demographic risks related to policyholder benefits. Distributions are calibrated for each of these risks by fitting to relevant external and internal data.

Furthermore, a significant level of additional granularity is included in the modelling of spread risk. Separate calibrations have been performed for each asset class within the scope of the spread risk module to ensure the calibration accurately reflects the differentiated risk profile of the assets held and risk mitigants, such as underlying collateral and high levels of security. This provides a level of granularity not provided by the standard formula. This also means that capital is held against assets which the standard formula considers to be risk-free, such as gilts.

The stochastic approach used in the Internal Model, where the impacts from a large number of individual scenarios are considered, allows Rothesay to precisely model the interactions between each risk in each scenario. This provides a more accurate representation of how Rothesay would expect its balance sheet to evolve under stress. The dynamics of the Matching Adjustment are explicitly captured under this approach. This includes recalculation of the fundamental spreads following a sustained period of stress, the requirement to re-establish a compliant Matching Adjustment Portfolio post stress (for example, meeting the PRA's three cash flow matching tests) and subsequent recalculation of the Matching Adjustment. This is particularly important for Rothesay's two largest risks—spreads widening and longevity – which interact closely in the derivation of the Matching Adjustment spread. Rothesay does not apply the dynamic volatility adjustment under stress.

Using stochastic modelling, Rothesay produces a full loss distribution of Own Funds over a one-year horizon. In contrast, the standard formula calculates standalone capital requirements for each sub-module, which are then aggregated, and does not produce a full loss distribution. The dependency structure between internal model risks is modelled under a copula framework. Repeated sampling from the resulting joint distribution generates a scenario set, for which the change in Own Funds is evaluated in every scenario, and ranked in order of increasing loss. The SCR is derived directly from this loss distribution, and is consistent with a 1-in-200 year loss over a one-year horizon.

E. Capital management continued

E.4.2 Nature and appropriateness of the data used within the internal model

A significant volume of data is used in the calibration of the stresses at an individual asset class level and in the calibration of the dependency structure.

Market data sourced from providers such as Merrill Lynch and Standard & Poor's has been used in the calibration of the spread widening and ratings migration elements of the spread calibration, and time series of spreads on Credit Default Swap indices are used to calibrate the risk mitigating impact of credit hedges under stress, as well as the stressed default probabilities of derivative and reinsurance counterparties.

Market data has in some cases been supplemented by internally sourced data where appropriate. In all cases, the credibility and relevance of the data were considered and documented during the calibration process, and where multiple credible data sources were available these alternatives were analysed and compared during the calibration process.

Expert judgement has informed some areas of the calibration where the available data was judged to be incomplete, lacking relevance or credibility, or otherwise unreliable, and Rothesay maintains a log documenting the nature and materiality of any expert judgements.

E.5 Non-compliance with the MCR and SCR

RL and RLP have continued to meet both the Minimum Capital Requirement and Solvency Capital Requirement during 2025 and to the date of signing.

E.6 Any other information

This section is not subject to audit.

E.6.1 Amortisation of transitional solvency relief

Transitional solvency relief amortises linearly to zero, falling by another 1/16th on 1 January 2026. As it does so, there is a second order effect on the SCR as a result of tax. The MCR is not impacted by the amortisation of transitional solvency relief.

The table below shows the impact of allowing for amortisation of 1/16th of transitional solvency relief on 1 January 2026:

1 January 2026 (after amortisation)	RL	RLP
Assets (£m)	72,868	72,964
Technical provisions (£m)	(63,860)	(63,860)
Own Funds eligible to meet SCR (£m)	9,008	9,104
SCR (£m)	3,673	3,673
Surplus above SCR	5,335	5,431
SCR coverage (%)	245%	248%
SCR coverage without transitional solvency relief (%)	241%	244%
MCR (£m)	1,333	1,333
Own Funds eligible to meet MCR (£m)	7,438	7,534
MCR coverage (%)	558%	565%

E. Capital management **continued**

Insurance Reporting Templates

The following QRTs are required for the SFCR:

QRT reference	QRT template name
Group QRTs	
IR.02.01.02	Balance sheet
IR.05.03.02	Life income and expenditure
IR.22.01.22	Impact of long-term guarantees, measures and transitionals
IR.23.01.04	Own Funds
IR.25.04.22	Solvency Capital Requirement
IR.32.01.22	Undertakings in the scope of the Group
Solo QRTs	
IR.02.01.02	Balance sheet
IR.05.03.02	Life income and expenditure
IR.12.01.02	Life technical provisions
IR.22.01.21	Impact of long-term guarantees, measures and transitionals
IR.23.01.01	Own Funds
IR.25.04.21	Solvency Capital Requirement
IR.28.01.01	Minimum Capital Requirement – only life or only non-life insurance or reinsurance activity

The templates are included as an appendix to this report. Rounding in the QRTs is in thousands.

F. Directors' responsibility statement

Rothesay Limited and Rothesay Life Plc – Financial year ended 31 December 2025

We acknowledge our responsibility for preparing Rothesay's SFCR in all material respects in accordance with the PRA Rules and the Solvency II Regulations.

We are satisfied that:

- a) throughout the financial year to 31 December 2025, Rothesay has complied in all material respects with the requirements of the PRA Rules and the Solvency II Regulations as applicable to the Group; and
- b) it is reasonable to believe that Rothesay has continued so to comply subsequently and will continue so to comply in future.

The SFCR was approved by the Board of Directors on 26 March 2026 and was signed on its behalf by:

Graham Butcher
Chief Financial Officer

26 March 2026

Rothesay Limited and Rothesay Life Plc Matching Adjustment attestation statement

In my opinion, as at the effective date of the firm's Solvency and Financial Condition Report (SFCR): the fundamental spread used by the firm in calculating the Matching Adjustment reflects compensation for all retained risks, and the Matching Adjustment can be earned with a high degree of confidence from the assets held in the relevant portfolio of assets.

Graham Butcher
Chief Financial Officer

26 March 2026

G. External auditors' report

Report of the external independent auditors to the Directors of Rothesay Limited ('the Company') pursuant to Rule 4.1 (2) of the External Audit Part of the PRA Rulebook applicable to Solvency II firms

Report on the Audit of the relevant elements of the Single Group-Wide Solvency and Financial Condition Report

Opinion

- Except as stated below, we have audited the following documents prepared by the Company as at 31 December 2025:
- The 'Valuation for solvency purposes' and 'Capital management' sections of the Single Group-Wide Solvency and Financial Condition Report of the Company as at 31 December 2025, ('the Narrative Disclosures subject to audit');
- Group templates IR.02.01.02, IR.22.01.22, IR.23.01.04 and IR.32.01.22 (**'the Group Templates subject to audit'**); and
- Solo templates IR.02.01.02, IR.12.01.02, IR.22.01.21, IR.23.01.01 and IR.28.01.01 in respect of Rothesay Life Plc ('the Group members'), (together the **'Solo Templates subject to audit'**).

The Narrative Disclosures subject to audit, the Group Templates subject to audit and the Solo Templates subject to audit are collectively referred to as the **'relevant elements of the Single Group-Wide Solvency and Financial Condition Report'**.

We are not required to audit, nor have we audited, and as a consequence do not express an opinion on the:

- Additions to the Fundamental Spread – any increase made under rule 4.17 of the Matching Adjustment Part of the PRA Rulebook for Solvency II firms to the Fundamental Spread used in the calculation of the Matching Adjustment and included in the technical provisions disclosed in relevant elements of the Solvency and Financial Condition Report.
- **Other Information** which comprises:
 - Information contained within the relevant elements of the Single Group-Wide Solvency and Financial Condition Report set out above which is, or derives from the Solvency Capital Requirement, as identified in the Appendix to this report;
 - The 'Summary', 'Business and performance', 'System of governance' and 'Risk profile' elements of the Single Group-Wide Solvency and Financial Condition Report;
 - Group templates IR.05.03.02 and IR.25.04.22;
 - Solo templates IR.05.03.02 and IR.25.04.21;
 - Information calculated in accordance with the previous regime used in the calculation of the transitional measure on technical provisions, and as a consequence all information relating to the transitional measure on technical provisions as set out in the Appendix to this report and
 - The written acknowledgement by management of their responsibilities, including for the preparation of the Single Group-Wide Solvency and Financial Condition Report **'the Responsibility Statement'**.

To the extent the information subject to audit in the relevant elements of the Single Group-Wide Solvency and Financial Condition Report includes amounts that are totals, sub-totals or calculations derived from the Other Information or additions to the Fundamental Spread, we have relied without verification on the Other Information and the additions to the Fundamental Spread.

In our opinion, the information subject to audit in the relevant elements of the Single Group-Wide Solvency and Financial Condition Report of the Company as at 31 December 2025 is prepared, in all material respects, in accordance with the financial reporting provisions of the PRA Rules, as modified by relevant supervisory modifications, and as supplemented by supervisory permissions and determinations.

G. External auditors' report **continued**

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (UK) (ISAs (UK)) including ISA (UK) 800 and ISA (UK) 805, and applicable law. Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the relevant elements of the Single Group-Wide Solvency and Financial Condition Report section of our report. We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of the Single Group-Wide Solvency and Financial Condition Report in the UK, including the FRC's Ethical Standard as applied to public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

Our evaluation of the Directors' assessment of the Company's ability to continue to adopt the going concern basis of accounting included:

- Obtaining management's updated going concern assessment and material assumptions made using our knowledge of the Company's business performance, review of regulatory correspondence and obtaining further corroborating evidence;
- Assessing the regulatory solvency coverage and liquidity position in the forward looking scenarios considered, which have been driven by the Group's ORSA as well as any relevant external factors;
- Considering information obtained during the course of the audit and publicly available market information to identify any evidence that would contradict the Directors' assessment of going concern; and
- Inquiring and understanding the actions taken by management to mitigate the identified risks, including review of the Board Risk Committee minutes and attendance at all Audit Committee meetings.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company's ability to continue as a going concern for a period of at least twelve months from the date on which the Single Group-Wide Solvency and Financial Condition Report is authorised for issue.

In auditing the Single Group-Wide Solvency and Financial Condition Report, we have concluded that the Directors' use of the going concern basis of accounting in the preparation of the Single Group-Wide Solvency and Financial Condition Report is appropriate.

However, because not all future events or conditions can be predicted, this conclusion is not a guarantee as to the Company's ability to continue as a going concern.

Our responsibilities and the responsibilities of the Directors with respect to going concern are described in the relevant sections of this report.

Emphasis of Matter – Basis of Accounting

We draw attention to the 'Valuation for solvency purposes' and 'Capital Management' sections of the Single Group-Wide Solvency and Financial Condition Report, which describe the basis of accounting. The Single Group-Wide Solvency and Financial Condition Report is prepared in compliance with the financial reporting provisions of the PRA Rules, and therefore in accordance with a special purpose financial reporting framework. The Single Group-Wide Solvency and Financial Condition Report is required to be published, and intended users include but are not limited to the Prudential Regulation Authority. As a result, the Single Group-Wide Solvency and Financial Condition Report may not be suitable for another purpose. Our opinion is not modified in respect of this matter.

Other Information

The Directors are responsible for the Other Information.

Our opinion on the relevant elements of the Single Group-Wide Solvency and Financial Condition Report does not cover the Other Information and we do not express an audit opinion or any form of assurance conclusion thereon.

G. External auditors' report continued

In connection with our audit of the Single Group-Wide Solvency and Financial Condition Report, our responsibility is to read the Other Information and, in doing so, consider whether the Other Information is materially inconsistent with the relevant elements of the Single Group-Wide Solvency and Financial Condition Report, or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the relevant elements of the Single Group-Wide Solvency and Financial Condition Report or a material misstatement of the Other Information. If, based on the work we have performed, we conclude that there is a material misstatement of this Other Information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of Directors for the Single Group-Wide Solvency and Financial Condition Report

The Directors are responsible for the preparation of the Single Group-Wide Solvency and Financial Condition Report in accordance with the financial reporting provisions of the PRA Rules, which have been modified by the modifications, and supplemented by the permissions and determinations made by the PRA under section 138A of FSMA and the PRA Rules, as detailed below:

- 2197307 – Permission to apply a transitional deduction to technical provisions
- 3106329 – Permission to recalculate the transitional deduction as at 30 June 2016 to reflect the change in economic conditions between 10 March 2016 and 30 June 2016
- 4996708 – Decision to classify £350m of loan notes issued by RLP in September 2018 as restricted Tier 1 capital
- 4973403 – Approval to use the PIM for the calculation of the SCR
- 5274984 – Permission to make changes to the PIM, in particular to include Dutch mortgages
- 5278094 – Permission to apply a Matching Adjustment as per a revised application, with an addendum covering Dutch mortgages and other changes, replacing the 2015 approvals
- 2469 – Permission to recalculate the transitional deduction as at 31 December 2020 to reflect the change in economic conditions
- 3501 – Decision to classify £450m of loan notes issued by RLP in October 2021 as restricted Tier 1 capital
- 5487 – Permission to recalculate the transitional deduction as at 30 June 2022
- 6139 – Permission to apply a Matching Adjustment for the risk-free interest rate term structure
- 6316 – Permission to recalculate the transitional deduction as at 31 December 2022 to reflect the change in economic conditions
- 6319 – Approval for the Full Internal Model
- 7363 – Permission to recalculate the transitional deduction
- 8975 – Permission to apply a volatility adjustment to the relevant risk-free interest rate term structure
- 9002 – Permission to apply the Transitional Measure on Technical Provisions under the PRA Rulebook
- 9081 – Renewal of the decision to allow the Group to produce a single Group-wide SFCR
- 9404 – Renewal of the decision for the participating Solvency II undertaking that is a firm, or if there is none, the UK holding company or the relevant insurance group undertakings
- 9669 – Renewal of the decision applying to any necessary changes at the level of the insurance holding company or mixed financial holding company which does not have its head office in the UK or Gibraltar
- 10472 – Permission to apply a Matching Adjustment for the risk-free interest rate term structure
- 10955 – Permission to redeem £250m of 8% Tier 2 notes with 10-year duration (due 30 October 2025) as a basic own funds item

The Directors are also responsible for such internal control as they determine is necessary to enable the preparation of a Single Group-Wide Solvency and Financial Condition Report that is free from material misstatement, whether due to fraud or error.

Auditors' Responsibilities for the Audit of the relevant elements of the Single Group-Wide Solvency and Financial Condition Report

It is our responsibility to form an independent opinion as to whether the information subject to audit in the relevant elements of the Single Group-Wide Solvency and Financial Condition Report is prepared, in all material respects, in accordance with financial reporting provisions of the PRA Rules.

G. External auditors' report **continued**

Our objectives are to obtain reasonable assurance about whether the relevant elements of the Single Group-Wide Solvency and Financial Condition Report are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance, but it is not a guarantee that an audit conducted in accordance with ISAs (UK) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the decision making or the judgement of the users taken on the basis of the Single Group-Wide Solvency and Financial Condition Report.

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The extent to which our procedures are capable of detecting irregularities, including fraud, is detailed below.

Based on our understanding of the Group members and Company and industry, we identified that the principal risks of non-compliance with laws and regulations related to Solvency II regulations, and we considered the extent to which non-compliance might have a material effect on the Single Group-Wide Solvency and Financial Condition Report. We also considered those laws and regulations that have a direct impact on the Single Group-Wide Solvency and Financial Condition Report such as the PRA Rulebook applicable to Solvency II firms. We evaluated management's incentives and opportunities for fraudulent manipulation of the Single Group-Wide Solvency and Financial Condition Report (including the risk of override of controls), and determined that the principal risks were related to inappropriate adjustments to derive the Solvency II Balance Sheet, such as increasing the value of Own Funds of the Company, management bias in estimates and judgemental areas of the Solvency II Balance Sheet and Solvency Capital Requirement, such as Solvency II valuation of Life Technical Provisions and the Solvency II valuation of Investments under an Alternative Valuation Model ('AVM'). Audit procedures performed included:

- Discussions with the Board, management, Internal Audit, senior management involved in the Risk and Compliance functions and the Group's legal function, including consideration of known or suspected instances of non-compliance with laws and regulations and fraud relevant to the SFCR;
- Assessment of any matters reported on the Group's whistleblowing register and the results of management's investigation of such matters;
- Reading key correspondence with the Prudential Regulation Authority ('PRA') and the Financial Conduct Authority ('FCA') in relation to compliance with laws and regulations, including published waivers, permissions, modifications on the FCA register;
- Reviewing relevant meeting minutes including those of the Risk Committee and attending all Audit Committees;
- Procedures relating to the valuation of Life Technical Provisions, in particular longevity assumptions, the internal credit rating of illiquid assets within the Matching Adjustment portfolio, and the valuation of investments using Alternative Valuation Models. In addition, we consider whether there are indicators of management bias in the Solvency II valuation; and
- Identifying material adjustments to derive the Solvency II financial information from the statutory financial statements and assessing for indicators of material non-compliance with Solvency II regulations.

There are inherent limitations in the audit procedures described above. We are less likely to become aware of instances of non-compliance with laws and regulations that are not closely related to events and transactions reflected in the Single Group-Wide Solvency and Financial Condition Report. Also, the risk of not detecting a material misstatement due to fraud is higher than the risk of not detecting one resulting from error, as fraud may involve deliberate concealment by, for example, forgery or intentional misrepresentations, or through collusion.

A further description of our responsibilities for the audit is located on the Financial Reporting Council's website at: www.frc.org.uk/auditorsresponsibilities. This description forms part of our auditors' report.

Use of this report

This report, including the opinion, has been prepared for the Board of Directors of the Company in accordance with External Audit rule 2.1 of the Solvency II firms Sector of the PRA Rulebook and for no other purpose. We do not, in providing this report, accept or assume responsibility for any other purpose or to any other party save where expressly agreed by our prior consent in writing.

G. External auditors' report **continued**

Other Matter – Internal model

The Company has authority to calculate its Group Solvency Capital Requirement using an internal model ('the Group Model'). In forming our opinion (and in accordance with PRA rules), we are not required to audit the inputs to, design of, operating effectiveness of and outputs from the Group Model and the Solo Models, or whether the Group Model and the Solo Models are being applied in accordance with the Company's and the Group members' application or approval order.

Other Matter – Additions to the Fundamental Spread

In accordance with Rule 4.17 of the Matching Adjustment part of the PRA Rulebook, firms are permitted to increase the Fundamental Spreads where considered necessary to ensure they cover all risks retained by the Group. In forming our opinion (and in accordance with PRA Rules), we are not required to audit increases and do not report on the appropriateness of such increases to the Fundamental Spreads, if any.

Report on Other Legal and Regulatory Requirements

Sectoral Information

In our opinion, in accordance with Rule 4.2 of the External Audit Part of the PRA Rulebook, the sectoral information has been properly compiled in accordance with the relevant PRA rules and UK law relating to that undertaking from information provided by members of the Group and the relevant insurance Group undertaking.

Other Information

In accordance with Rule 4.1 (3) of the External Audit Part of the PRA Rulebook for Solvency II firms we are also required to consider whether the Other Information is materially inconsistent with our knowledge obtained in the audit of the relevant elements of the Solvency and Financial Condition Report and (where applicable) the audit of the Company's statutory financial statements. If, based on the work we have performed, we conclude that there is a material misstatement of this Other Information, we are required to report that fact. We have nothing to report in this regard.

The engagement partner on the audit resulting in this independent auditors' report is Thomas Ferguson.

Appendix – relevant elements of the Single Group-wide Solvency and Financial Condition Report that are not subject to audit

The relevant elements of the Single Group-wide Solvency and Financial Condition Report that are not subject to audit comprise:

- The following elements of Group template IR.02.01.02:
 - Row R0565: Transitional (TMTP) – life
 - Row R0552: Risk margin – total
 - Row R0554: Risk margin – non-life
 - Row R0556: Risk margin – life
- The following elements of Group template IR.22.01.22
 - Column C0030 – Impact of transitional on technical provisions
 - Row R0010 – Technical provisions
 - Row R0090 – Solvency Capital Requirement
- The following elements of Group template IR.23.01.04
 - Row R0020: Non-available called but not paid in ordinary share capital at Group level
 - Row R0060: Non-available subordinated mutual member accounts at Group level
 - Row R0080: Non-available surplus at Group level
 - Row R0100: Non-available preference shares at Group level
 - Row R0120: Non-available share premium account related to preference shares at Group level
 - Row R0150: Non-available subordinated liabilities at Group level
 - Row R0170: The amount equal to the value of net deferred tax assets not available at the Group level
 - Row R0190: Non-available Own Funds related to other Own Funds items approved by supervisory authority
 - Row R0210: Non-available minority interests at Group level
 - Row R0380: Non-available ancillary Own Funds at Group level
 - Rows R0410 to R0440 – Own funds of other financial sectors
 - Row R0680: Group SCR
 - Row R0740: Adjustment for restricted own fund items in respect of Matching Adjustment portfolios and ring-fenced funds
 - Row R0750: Other non-available Own Funds
- The following elements of Solo template IR.02.01.02:
 - Row R0565: Transitional (TMTP) – life
 - Row R0552: Risk margin – total
 - Row R0554: Risk margin – non-life
 - Row R0556: Risk margin – life
- The following elements of Solo template IR.12.01.02:
 - Row R0100: Risk margin
 - Rows R0140 to R0180: Amount of the transitional on Technical Provisions
- The following elements of Solo template IR.17.01.02
 - Row R0280: Risk margin
- The following elements of Solo template IR.22.01.21
 - Column C0030 – Impact of transitional on technical provisions
 - Row R0010 – Technical provisions
 - Row R0090 – Solvency Capital Requirement
- The following elements of Solo template IR.23.01.01
 - Row R0580: SCR
 - Row R0740: Adjustment for restricted own fund items in respect of Matching Adjustment portfolios and ring-fenced funds
- The following elements of Solo template S.28.01.01
 - Row R0310: SCR
- Elements of the Narrative Disclosures subject to audit identified as 'unaudited'.

General information

Entity name	Rothesay Life PLC
Entity identification code and type of code	LEI/MFQO711J5UPYBWXSPG12
Type of undertaking	Life undertakings
Country of incorporation	GB
Language of reporting	en
Reporting reference date	31 December 2025
Currency used for reporting	GBP
Accounting standards	IFRS
Method of Calculation of the SCR	Full internal model
Matching adjustment	Use of matching adjustment
Volatility adjustment	Use of volatility adjustment
Transitional measure on the risk-free interest rate	No use of transitional measure on the risk-free interest
Transitional measure on technical provisions	Use of transitional measure on technical provisions

Glossary of Terms

Adjusted operating profit	Alternative presentation of operating profit which seeks to provide an explanation of the way in which profits have been generated by considering the movement in assets alongside the movement in liabilities.
Annuity	A series of regular payments made to an individual until their death. Payments may be indexed.
Best estimate liability (BEL)	The liabilities of Rothesay calculated on a best estimate basis under Solvency II, i.e. where all the assumptions made in the calculation are best estimate.
Borrowing costs	Interest payable on borrowings.
Bulk annuity	A bulk annuity, sometimes referred to as a bulk purchase annuity, is a contract between a defined benefit pension scheme and an insurance company, whereby an insurance company insures some or all of the annuities being paid by the pension scheme.
Buy-in	Held as an asset of the pension scheme, a bulk annuity buy-in is a contract that covers all or some of the benefits for a subset of scheme members. The scheme retains responsibility for paying pensions to members but the contract protects the scheme against all risks relating to the insured benefits, for example longevity risk and inflation risk.
Buy-out	The bulk annuity buy-out is a contract that covers all of the benefits for all or a subset of scheme members. The insurer issues individual policies to members under which pensions are paid. Once all benefits are covered, the pension scheme can be wound up.
Carbon intensity	A measure of emissions that allows for comparison between entities of different size. It is measured in t CO ₂ e/million USD of revenue annually.
CO₂e	Carbon dioxide equivalent – greenhouse gases (GHGs) all have varying warming potentials and therefore in order to report one metric, other GHGs are converted to CO ₂ equivalent.
Collateralised agreements/ investments	Loans secured on property or other collateral.
Collective investment schemes	A way of investing money alongside other investors.
Contractual service margin (CSM)	Defined within the IFRS 17 standard as unearned profit on a group of contracts that relate to future service to be provided.
Corporate bonds and other corporate debt	These are debt securities issued by corporations which are not guaranteed by governments.
Credit risk	The risk of loss or of adverse change in the financial situation resulting from fluctuations in the credit standing of issuers of securities, counterparties and any debtors.
Currency rate risk	The risk that asset or liability values, cash flows, income or expenses will be affected by changes in exchange rates. Also referred to as foreign exchange risk.
Deferred annuities	Annuities or pensions due to be paid from a future date or when the policyholder reaches a specified age.
Economic capital	Represents management's internal risk-based calculation of the capital required to remain solvent for a 99.5% confidence level over a one-year period.
Economic profits	Profits or losses generated as a result of changes in economic conditions.
Employee benefit trust (EBT)	A trust established to purchase and hold shares of the Company for delivery under employee share schemes.

Glossary of Terms **continued**

Employee Share Incentive Plan (ESIP) Trust	A trust established to purchase and hold shares of the Company for delivery under an HMRC-approved employee share scheme.
Fair value	Amount that would be received on sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.
FACT Chagall & Morisot	FACT Chagall and Morisot are French <i>fonds commun de titrisation</i> , a form of French securitisation undertakings which hold home loan investments.
Financial Conduct Authority (FCA)	The UK regulatory body that regulates the financial services industry in the UK. Its role includes protecting consumers, keeping the industry stable, and promoting healthy competition between financial service providers.
Finance costs	Represent interest payable on borrowings.
Fixed-for-term mortgages	Residential mortgages where the interest rate payable is fixed at outset for the whole term of the mortgage.
Full internal model (FIM)	Under Solvency II, insurer's own model used to calculate the solvency capital requirement in relation to all material quantifiable risks approved by the PRA.
Government, sub-sovereign and agency obligations	A bond issued by a country's government or corporate debt which is guaranteed by a government to repay borrowed money at a specific time.
Gross premiums written	Premiums received by RLP on new business and generated through regular premiums.
In-force	An insurance policy or contract reflected on records that has not expired, matured or otherwise been surrendered or terminated.
Insurance risk	The risk of loss or of adverse change in the value of insurance liabilities, due to inadequate pricing and provisioning assumptions.
International Financial Reporting Standards (IFRS)	Accounting standards that are applied in preparing Rothesay's consolidated financial statements.
Investment return	Comprises all interest income on financial investments at fair value through profit and loss, realised investment gains and losses and movements in unrealised gains and losses, as well as expenses directly related to investments executed during the year.
Inwards reinsurance	Longevity-only reinsurance where Rothesay is acting as the reinsurer.
Lambay Capital DAC	Lambay Capital Designated Activity Company.
Lifetime mortgages	Mortgages extended to older customers (aged 55 and over) against their residential property at low loan to value percentage. Unlike a typical residential mortgage, no interest is paid monthly by the customer. Instead, the interest is simply added to the principal loan amount with the loan only repayable on death or entry into long-term care of the last remaining homeowner.
Limited Price Indexation (LPI)	LPI is a pricing index used to calculate increases in components of scheme pension payments in the UK.
Liquidity premium	An addition to the risk-free rate used when projecting investment returns and discounting cash flows on certain types of contracts where the liabilities are illiquid and have cash flows that are predictable.
Liquidity risk	The risk of being unable to realise investments and other assets in order to settle financial obligations when they fall due.
Longevity reinsurance (%)	The longevity reinsurance percentage provides an indication of the extent to which Rothesay is protected from fluctuations in longevity through reinsurance. It is derived from the IFRS sensitivity analysis.

Glossary of Terms **continued**

Longevity risk	The risk that a company could be exposed to a higher payout as a result of increasing life expectancy.
Loss Absorbing Capacity of Deferred Taxes (LACDT)	The Loss Absorbing Capacity of Deferred Taxes adjustment reflects the fact that new deferred tax assets would be created in the event that Rothesay incurred unexpected losses, resulting in an increase of Own Funds. The LACDT reduces the SCR.
LTMF	LT Mortgage Financing Limited.
Market risk	The risk of loss or of adverse change resulting, directly or indirectly, from fluctuations in the level and in the volatility of market prices of assets, liabilities and financial instruments.
Matching Adjustment	The Matching Adjustment, a concept in Solvency II, is broadly equivalent to the illiquidity premium that can be earned on the illiquid assets held to back illiquid liabilities.
Matching Adjustment Portfolio	A segregated portfolio of assets and liabilities set up for Solvency II purposes. Liabilities written into the Matching Adjustment Portfolio are discounted at risk-free plus a Matching Adjustment derived from the assets in the portfolio. Assets and liabilities must meet eligibility criteria to be included in the portfolio.
Mortality tables	A table which shows for each age, what the probability is that a person of that age and gender will die before their next birthday.
Net Zero	A state in which the GHGs going into the atmosphere (anthropogenic emissions) are balanced by their removal out of the atmosphere (carbon sinks/removal).
New business	New insurance contracts and reinsurance inwards sold during the period. Includes business acquired through purchase of companies.
New business premium	Premium paid on new business transacted during the period and adjustments to new business premiums from prior periods. New business premiums and regular premium income make up gross premiums written.
New business profit	IFRS new business profit projected to be realised once the premium is invested according to Rothesay's long-term investment strategy, before release of IFRS margins.
No negative equity guarantee (NNEG)	Lifetime mortgages provide what is known as a NNEG, which means that the mortgage repayment amount (loan principal plus interest on redemption) cannot exceed the sale proceeds of the property on which the loan is secured.
Operating profit before tax	Gross IFRS profit less the impact of market fluctuations, exceptional expenses and financing costs.
Operational risk	The risk arising from inadequate or failed internal processes, personnel or systems, or from external events. Operational risk includes conduct and cyber risk.
Own Funds	Assets in excess of those required to meet the Solvency II technical provisions.
Own risk and solvency assessment (ORSA)	An assessment of the risk to which the business is exposed as well as solvency forecasting in a range of scenarios, including consideration of the stresses that could jeopardise Rothesay's business plans.
Partial internal model (PIM)	Under Solvency II, insurer's own model used to calculate the solvency capital requirement in relation to particular risks approved by the PRA.
Part VII transfers	Court-approved transfer of a portfolio of contracts from one insurer to another under Part VII of the Financial Services and Markets Act 2000.
Performance of in-force book	Profits or losses generated on the in-force book of business.

Glossary of Terms **continued**

Pillar 1	Under Solvency II, represents the solvency capital requirement calculated using a standard formula or (partial) internal model.
Pillar 2	Under Solvency II, represents the required risk management principles and practices relating to the risk and capital estimates covered by Pillar 1.
Policyholders	Rothesay generally uses the term policyholder to refer to the individual immediate and deferred annuitants whose benefits are insured by Rothesay regardless of whether the insurance is provided under a bulk annuity (where the contract is with the pension scheme) or a reinsurance policy (where the contract is with the insurance company).
Prudential Regulation Authority (PRA)	The PRA is a UK regulatory body responsible for prudential regulation and supervision of banks, building societies, credit unions, insurers and major investment firms.
qx	qx is actuarial notation used to represent the probability of a life aged x dying during the year.
Regular premiums	Payments of premium made regularly over the duration of the policy.
Reinsurance	Protection sold to or purchased from another insurance company.
Risk adjustment	Defined within IFRS 17 as the compensation that Rothesay requires for bearing the non-financial uncertainty in the (re)insurance contract liabilities.
Risk margin	Under Solvency II, the cost of transferring non-hedgeable risks.
RHFL	Riverton Home Finance Limited.
RL	Rothesay Limited.
RLP	Rothesay Life Plc, the Group's regulated life company.
RMA1	Rothesay MA No.1 Limited.
RMA3	Rothesay MA No.3 Limited.
RMA4	Rothesay MA No.4 Limited.
RML	Rothesay Mortgages Limited (formerly Rothesay MA No.2 Limited).
RPC1	Rothesay Property Company 1 Limited.
RPML	Rothesay Pensions Management Limited, the Group's service company.
S3PMA/S3PFA	S3PMA/S3PFA refer to mortality tables drawn up by the Continuous Mortality Investigation (CMI) of the Institute and Faculty of Actuaries. These represent version 3 of the industry standard tables derived from pensioner data from self-administered pension schemes. Separate tables are utilised for males and females.
SARs	Share Appreciation Rights plan. Provides for grants of cash-settled share appreciation rights.
SCR coverage ratio	Own Funds divided by SCR. Measure of surplus above capital requirement.
Single premiums	Single premium policies of insurance are those that require only a single lump sum payment from the policyholder.
Sk	Smoothing parameter in CMI longevity improvement model determining the weighting on recent experience. Given recent improvements, a higher Sk than adopted by RL will generally lead to a higher initial assumed rate of mortality improvement.

Glossary of Terms **continued**

Solvency capital requirement (SCR)	Under Solvency II, capital requirement to withstand a 1-in-200 year event.
Solvency II	The solvency regime applicable from 1 January 2016. Under Solvency II, Rothesay is required to hold the greater of the capital required under the new Solvency II Pillar 1 framework and the capital required under our own economic capital models Solvency II Pillar 2.
Strategy risk	The risk of loss in future earnings and capital arising from changes in the competitive, economic, legal or political environment, changing customer behaviour, or a failure to select appropriate strategic or long-term business plans.
Subordinated loan	A fixed interest issue or debt that ranks below other debt in order of priority for repayment if the issuer is liquidated. Holders are compensated for added risk through higher rates of interest. Under EU insurance regulation, subordinated debt is not treated as a liability and counts towards the coverage of the required minimum margin of solvency with limitations.
Surrender	The termination of a life insurance policy or annuity contract at the request of the policyholder after which the policyholder receives the cash surrender value, if any, of the contract.
Sustainability risks	An Environmental, Social or Governance (ESG) event or impact that could cause a negative impact including financial and reputational.
Technical Provisions	The sum of the best estimate of liabilities allowing for reinsurance inwards and a risk margin.
Yield	A measure of the income received from an investment compared to the price paid for the investment. Normally expressed as a percentage.
